

Small Cap Quality Value Portfolio

Second Quarter 2022 | Managed Accounts

Manager of the
Decade for the last
2 years (2020 - 2021)

Portfolio Review

The Small Cap Quality Value portfolio outperformed the Russell 2000 Value Index in the second quarter. Good stock selection in industrials and financials contributed positively to performance. An overweight and poor stock selection in consumer discretionary and poor stock selection in materials detracted from performance.

The biggest contributors to performance during the quarter were Stock Yards Bancorp and National Beverage. Stock Yards Bancorp reported its best organic loan growth in company history, strong credit quality metrics, and improving net interest margin, which resulted in positive earnings growth. These financial results coupled with a steepening of the yield curve helped the company's strong performance. National Beverage raised average selling prices to combat inflation, which helped the company's shares to perform well during the quarter. Other top contributors included WD-40, RLI and Anika Therapeutics.

The biggest detractors from performance were Scotts Miracle-Gro and The Cheesecake Factory. Scotts Miracle-Gro's shares lagged due to higher-than-expected inflation costs outpacing significant pricing actions. In early June, management reduced the company's annual sales and earnings outlook because of a lower-than-anticipated level of order replenishment by retailers. In addition, cannabis oversupply issues continue to weigh on the outlook for Hawthorne, the company's hydroponics division. The Cheesecake Factory rebounded from the onset of the COVID pandemic, but inflationary pressures have had a negative impact on the company's profitability. Other bottom detractors included Watsco, Latham Group and SiteOne Landscape Supply.

Purchases and Sales

During the quarter, we purchased Hillman Solutions and Lakeland Financial. We sold MGM Growth Properties. Hillman Solutions is a leading direct-store-distributor of hardware products (fasteners and hardware related items), personal protective equipment (gloves and eyewear), and robotic kiosk technologies (key and key fob duplication, pet tag engraving, and robotic knife sharpening) to retailers in North America. The company was founded in 1964 and is headquartered in Cincinnati, OH. Lakeland Financial is a bank holding company that engages in the provision of banking products and services, mostly to commercial clients. It offers commercial and consumer banking, trust and wealth management, brokerage, and treasury management commercial services. The company was founded in 1983 and is headquartered in Warsaw, IN. We sold our entire MGM Growth Properties position given the pending close of the acquisition of MGM Growth. The combined company will result in a market cap that is close to \$30 billion, which is far above that of the portfolio's average. We believe our investment in MGM Growth Properties has been a robust one, especially given that the company was well-protected during the pandemic with continuation of dividend payments even while many of its Las Vegas properties were forced to temporarily shut down.

Outlook

Signs of an economic slowdown and/or a recession are becoming increasingly obvious. Starting with the consumer (70% of gross domestic product), we have seen material retail sales shortfalls at large retailers and consumer confidence has hit 40-year lows. New orders for the Purchasing Managers' Index have fallen below 50, which signals contraction. Raw materials, such as copper, aluminum, nickel, and zinc, have already experienced significant declines in price in the second quarter. Even the strongest sectors (oil and semiconductors) started to show significant weakness late in the quarter. This may suggest that the U.S. is already in at least a technical recession (two consecutive quarters of negative GDP), and the Fed may be closer than investors realize to bringing inflation under control. Regardless, we believe valuations have become attractive longer term. Many stocks have declined off their highs, and speculation in IPOs, SPACs, and meme stocks is non-existent which makes for a more favorable long-term investing environment. In our view, quality companies have started to perform better on a relative basis given the slowing environment and flattening yield curve.

IMPORTANT RISK CONSIDERATIONS: Equity Securities: The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small or medium-sized companies may enhance that risk. **Limited Number of Investments:** Because the portfolio has a limited number of securities, it may be more susceptible to factors adversely affecting its securities than a portfolio with a greater number of securities. **Market Volatility:** Local, regional, or global events such as war, acts of terrorism, the speed of infectious illness or other public health issues, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio manager(s) to invest the portfolio's assets as intended.

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2020.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Small Cap Quality Value Wrap Composite has had a performance examination for the period from January 1, 1999 through December 31, 2020. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary Small Cap Quality Value Wrap Portfolios. Small Cap Quality Value Wrap Portfolios are invested in equity securities with capitalizations consistent with the Russell 2000® Value Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Value Index. The Russell 2000® Value Index is a market capitalization-weighted index of value-oriented stocks of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is June 1998. The composite was created in January 2002. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

Beginning on January 1, 2006, sub-advisory wrap fee portfolios are also included in composite results. Each sub-advisory relationship is included in the composite as one account. All portfolios included in this composite for all periods are wrap portfolios.

The standard wrap fee schedule in effect is 3.00% on total assets. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part IIA of Form ADV,

which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Performance results include the reinvestment of all income. Pure gross returns do not reflect the deduction of any expenses, including trading costs. Prior to December 31, 2005, net annual returns are calculated after deducting 1/4th of an assumed maximum annual wrap fee of 3% on a quarterly basis. Beginning January 1, 2006, net annual returns are calculated using actual fees incurred. If no fee data is provided by wrap sponsors, the maximum annual wrap fee of 3% is used to calculate net of fee performance. Beginning January 1, 2016, net annual returns are calculated by deducting 1/12th of an assumed maximum annual wrap fee of 3% on a monthly basis. Wrap fees include all charges for trading costs, portfolio management, custody and other administrative expenses.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using pure gross returns) and the benchmark for the 36-month period, is presented starting 2012 because prior to January 1, 2010, the composite return was calculated quarterly and 36 monthly returns are not available.
