

INVESTMENT OPPORTUNITY

The Fund seeks investment results that correspond, before fees and expenses, to the price and yield performance of the LifeSci Biotechnology Clinical Trials Index, which tracks the performance of select clinical trials stage biotechnology companies.

KEY FEATURES

High-Growth Potential — One of the most dynamic stock sectors, covering companies that design drugs, from entrepreneurial start-ups to global giants

Pure, Targeted Exposure — Passively invests solely in firms with promising drugs in clinical human trials that have not yet been approved by the FDA or gone into production

Equally Weighted — Equal stock weightings, at the time of semi-annual index rebalance, help ensure even relatively small firms with major breakthroughs can have meaningful impacts on returns

Performance data quoted represents past performance. Past performance does not guarantee future results. Investment return and principal value will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Please visit virtus.com for performance data current to the most recent month end.

The Total Expense Ratio represents the Fund's Total Annual Fund Operating Expenses, which includes the management fee and other expenses where applicable, except for certain payments that are paid directly by the Fund, as described in the Prospectus.

Index: The LifeSci Biotechnology Clinical Trials Index is designed to track the performance of U.S.-listed biotechnology stocks with a lead drug in the clinical trial stage of development, typically a Phase 1, Phase 2 or Phase 3 trial, but prior to receiving marketing approval. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.

IMPORTANT RISK CONSIDERATIONS

Exchange-Traded Funds (ETF): The value of an ETF may be more volatile than the underlying portfolio of securities it is designed to track. The costs to the portfolio of owning shares of an ETF may exceed the cost of investing directly in the underlying securities. **Equity Securities:** The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small, medium, or large-sized companies may enhance that risk. **Industry/Sector Concentration:** A portfolio that focuses its investments in a particular industry or sector will be more sensitive to conditions that affect that industry or sector than a non-concentrated portfolio. **Passive Strategy/Index Risk:** A passive investment strategy seeking to track the performance of the underlying Index may result in the portfolio holding securities regardless of market conditions or their current or projected performance. This could cause the portfolio's returns to be lower than if the portfolio employed an active strategy. **Correlation to Index:** The performance of the portfolio and its index may vary due to factors such as flows, transaction costs, whether the portfolio obtains every security in the index, and timing differences associated with additions to and deletions from the index. **Market Price/NAV:** At the time of purchase and/or sale, an investor's shares may have a market price that is above or below the fund's NAV, which may increase the investor's risk of loss. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Local, regional, or

global events such as war or military conflict, terrorism, pandemic, or recession could impact the portfolio, including hampering the ability of the portfolio's manager(s) to invest its assets as intended. **Prospectus:** For additional information on risks, please see the fund's prospectus.

IOPV, or Indicative Optimized Portfolio Value, is a calculation disseminated by the stock exchange that approximates the Fund's NAV every fifteen seconds throughout the trading day.

The Fund is an exchange-traded fund ("ETF"). The "net asset value" (NAV) of the Fund is determined at the close of each business day, and represents the dollar value of one share of the Fund; it is calculated by taking the total assets of the Fund, subtracting total liabilities, and dividing by the total number of shares outstanding. The NAV of the Fund is not necessarily the same as its intraday trading value. Fund investors should not expect to buy or sell shares at NAV because shares of ETFs such as the Fund are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Thus, shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns. NAV returns are calculated using the Fund's daily 4:00 pm NAV, and include the reinvestment of all dividends and other distributions (reinvested at the Fund's NAV on distribution ex-date). Market price returns are calculated using the 4:00 pm midpoint between the bid and offer, and include the reinvestment of all dividends and other distributions (reinvested at the 4:00 pm bid/offer midpoint on distribution ex-date). Market price returns do not represent the return you would receive if you traded at other times.

Please consider a Fund's investment objectives, risks, charges, and expenses carefully before investing.
