

INVESTMENT OVERVIEW

The Fund seeks current income and total return by investing primarily in high yield corporate bonds and other U.S. dollar denominated debt instruments of U.S. and non-U.S. issuers, with up to 100% of invested assets rated below investment grade. A sound, transparent, and repeatable process leverages competitive advantages and aims to capture upside potential while limiting downside risk.

KEY FEATURES

Full Market High Yield — Provides exposure to full high yield universe, including below investment grade and unrated debt securities

Diversification — High yield bonds may offer minimal correlation to investment grade fixed income sectors and only modest correlation to equities

Risk Management — Strict focus on bottom-up credit research, controls around portfolio construction, sell discipline, and trading strategy in an effort to mitigate downside exposure

AVERAGE ANNUAL TOTAL RETURNS (%) as of 06/30/19

Performance data quoted represents past results. Past performance is no guarantee of future results and current performance may be higher or lower than the performance shown. Investment return and principal value will fluctuate, so your shares, when redeemed, may be worth more or less than their original cost. Please visit Virtus.com for performance data current to the most recent month-end.

The fund class gross expense ratio is 0.88%. The net expense ratio is 0.68%, which reflects a contractual expense reimbursement in effect through 4/30/2020.

Average annual total return is the annual compound return for the indicated period and reflects the change in share price and the reinvestment of all dividends and capital gains. Returns for periods of one year or less are cumulative returns. Class I shares have no sales charges or distribution or service fees, therefore their returns do not reflect these expenses. Fees and expenses vary, and other share classes are subject to sales charges and fees. Class I shares are offered primarily to eligible institutional investors who purchase the minimum amounts required as described in the prospectus and may not be available to all investors. For fund performance on other share classes, please visit www.virtus.com.

IMPORTANT RISK CONSIDERATIONS

Credit & Interest: Debt securities are subject to various risks, the most prominent of which are credit and interest rate risk. The issuer of a debt security may fail to make interest and/or principal payments. Values of debt securities may rise or fall in response to changes in interest rates, and this risk may be enhanced with longer-term maturities. **High Yield-High Risk Fixed Income Securities:** There is a greater level of credit risk and price volatility involved with high yield securities than investment grade securities. **Foreign & Emerging Markets:** Investing internationally, especially in emerging markets, involves additional risks such as currency, political, accounting, economic, and market risk. **Prospectus:** For additional information on risks, please see the fund's prospectus.

GLOSSARY

Effective Duration: The change in the value of a fixed income security that will result from a 1% change in interest rates while taking into account the way changes in rates will affect the expected cash flows of any bond with an embedded option such as call or prepayment option. This measure assigns a probability to the exercise of a call option, where applicable, based on specified shifts in the yield curve. Duration is expressed as a number of years, and generally, the larger the duration, the greater the interest rate risk or reward for a portfolio's underlying bond prices. **Weighted Average Maturity:** The length of time until the average security in a fund will mature, be redeemed by its issuer, or paid down over time, which is the case with most securitized assets. **Alpha:** A risk-adjusted measure of an investment's excess return relative to a benchmark. **Beta:** A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. **R²:** A measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index. **Sharpe Ratio:** A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Standard Deviation:** Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk.

INDEX DEFINITION

Index: Bloomberg Barclays U.S. Corporate High Yield Bond Index measures fixed rate non-investment grade debt securities of U.S. corporations, calculated on a total return basis. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.

Please carefully consider a fund's investment objectives, risks, charges, and expenses before investing. RATINGS DISTRIBUTION METHODOLOGY

The ratings issued by Nationally Recognized Statistical Rating Organizations assess the credit worthiness of a corporation's or government's debt issues. The ratings apply to the fund's holdings and not the fund itself. Standard & Poor's, Moody's, and Fitch ratings are used. If all three agencies have rated the security, then the median rating based on numerical equivalents is used. If only two agencies have rated the security, then the lower of the two ratings is used. If only one agency has rated the security, the rating from that agency is used. Credit ratings are subject to change. AAA, AA, A, and BBB are investment grade ratings; BB, B, CCC, CC, C, and D are below-investment grade ratings.

Morningstar Rating™ for funds, or 'star rating,' is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take into account the effect of sales charges and loads.
