INVESTMENT OVERVIEW
The Fund seeks high current income and total return by investing primarily in high yield corporate bonds and other U.S. dollar denominated debt instruments of U.S. and non-U.S. issuers, with up to 100% of assets invested in securities rated below investment grade. A sound, transparent, and repeatable process leverages competitive advantages and aims to capture upside potential while limiting downside risk.

KEY FEATURES
Higher Quality High Yield — Emphasizes BB- and B-rated corporate bonds; seeks to invest in what are believed to be the healthiest and most undervalued credits in the non-investment grade space, identified through extensive bottom-up fundamental credit research
Diversification — High yield bonds may offer minimal correlation to investment grade fixed income sectors and only modest correlation to equities
Risk Management — Strict focus on bottom-up credit research, controls around portfolio construction, sell discipline, and trading strategy in an effort to mitigate downside exposure

AVERAGE ANNUAL TOTAL RETURNS (%) as of 09/30/20

Performance data quoted represents past performance. Past performance does not guarantee future results. Investment return and principal value will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Please visit virtus.com for performance data current to the most recent month end. This share class has no sales charges and is not available to all investors. Other share classes have sales charges. See virtus.com for details.

Average annual total return is the annual compound return for the indicated period and reflects the change in share price and the reinvestment of all dividends and capital gains. Returns for periods of one year or less are cumulative returns.

ANNUAL PERFORMANCE (%)

GROWTH OF $10,000

This chart assumes an initial investment of $10,000 made on 12/29/2000. As of 9/30/2020 the fund value would have been $35,268.89. Fund performance assumes reinvestment of dividends and capital gain distributions. This growth reflects no front end sales charges.
IMPORTANT RISK CONSIDERATIONS

Credit & Interest: Debt instruments are subject to various risks, including credit and interest rate risk. The issuer of a debt security may fail to make interest and/or principal payments. Values of debt instruments may rise or fall in response to changes in interest rates, and this risk may be enhanced with longer-term maturities. High Yield Fixed Income Securities: There is a greater risk of issuer default, less liquidity, and increased price volatility related to high yield securities than investment grade securities. Foreign Investments: Investing in foreign securities subjects the fund to additional risks such as increased volatility, currency fluctuations, less liquidity, and political, regulatory, economic, and market risk.

Market Volatility: Local, regional, or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio manager(s) to invest the portfolio's assets as intended.

Prospectus: For additional information on risks, please see the fund’s prospectus.

GLOSSARY

Effective Duration: The change in the value of a fixed income security that will result from a 1% change in interest rates while taking into account the way changes in rates will affect the expected cash flows of an bond with an embedded option such as call or prepayment option. This measure assigns a probability to the exercise of a call option, where applicable, based on specified shifts in the yield curve. Duration is expressed as a number of years, and generally, the longer the duration, the greater the interest rate risk or reward for a portfolio’s underlying bond prices. Weighted Average Maturity: The length of time until the average security in a fund will mature, be redeemed by its issuer, or paid down over time, which is the case with most securitized assets. Alpha: A risk-adjusted measure of an investment’s excess return relative to a benchmark. Beta: A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. R²: A measure that represents the percentage of a fund’s return that is explained by movements in a benchmark index. Sharpe Ratio: A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk.

INDEX DEFINITION

Index: The ICE BofA US High Yield BB-B Constrained Index measures performance of BBB/B non-deteriorated corporate bonds publicly issued in the U.S. domestic market, and is restricted to a maximum of 2% per issuer. The index is calculated on a total return basis. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.

Please consider a Fund’s investment objectives, risks, charges, and expenses carefully before investing.
