

THINK ALL FLOATING RATE FUNDS ARE THE SAME? THINK AGAIN.

SPOTLIGHT ON: VIRTUS SEIX FLOATING RATE HIGH INCOME FUND

A: SFRAX / C: SFRCX / I: SAMBX / R6: SFRZX

Not all floating rate leveraged loan strategies are the same. Some portfolios extend well beyond traditional credit-based holdings, with risk profiles closer to alternative investments. Evaluating a manager’s investment approach can help focus on potential interest rate protection without unnecessarily “dialing up” portfolio risk.

IMPORTANT RISK CONSIDERATIONS

Credit & Interest: Debt securities are subject to various risks, the most prominent of which are credit and interest rate risk. The issuer of a debt security may fail to make interest and/or principal payments. Values of debt securities may rise or fall in response to changes in interest rates, and this risk may be enhanced with longer-term maturities. **Bank Loans:** Loans may be unsecured or not fully collateralized, may be subject to restrictions on resale and/or trade infrequently on the secondary market. Loans can carry significant credit and call risk, can be difficult to value, and have longer settlement times than other investments, which can make loans relatively illiquid at times. **High Yield-High Risk Fixed Income Securities:** There is a greater level of credit risk and price volatility involved with high yield securities than investment grade securities. **Market Volatility:** Local, regional, or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio manager(s) to invest the portfolio's assets as intended. **Prospectus:** For additional information on risks, please see the fund's prospectus.
