

**INVESTMENT OPPORTUNITY**

The Fund seeks to provide passive exposure to U.S. listed, real asset securities by tracking the Indxx Real Asset Income Index, which is comprised of real estate, natural resources and infrastructure stocks with a history of providing income and dividend growth. The Fund differs from other real asset strategies in that it does not directly invest in hard assets or commodity instruments; rather, it exclusively invests in stocks in real asset categories, and has a specific focus on income. Investing in stocks across real asset segments may offer investors the opportunity to participate in equity growth potential, with the additional potential benefit of protecting against rising inflation.

**KEY FEATURES**

**Targeted Exposure** — Provides passive exposure to real asset equity securities that have a history of producing income

**Powerful Diversifier** — Offers an alternative to traditional equity income and fixed income investments

**Focus on Dividend Growth** — Emphasizes companies which have demonstrated dividend growth over the last three years

**INVESTMENT PROCESS**

- 1 Investment universe of dividend-paying, U.S.-listed equity securities across three real asset categories: infrastructure, real estate, and natural resources
- 2 Each real asset category consists of the top 30 dividend growers systematically selected from the 60 highest dividend-paying securities in the category
- 3 Portfolio of 90 holdings, weighted equally and rebalanced quarterly

## IMPORTANT RISK CONSIDERATIONS

**Exchange-Traded Funds (ETF):** The value of an ETF may be more volatile than the underlying portfolio of securities it is designed to track. The costs to the portfolio of owning shares of an ETF may exceed the cost of investing directly in the underlying securities. **Equity Securities:** The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small or medium-sized companies may enhance that risk. **Equity REITs:** The portfolio may be negatively affected by factors specific to the real estate market, such as interest rates, leverage, property, and management; and factors specific to investing in a pooled vehicle such as poor management and concentration risk. **Infrastructure:** A portfolio that focuses its investments in infrastructure-related companies will be more sensitive to conditions affecting their business or operations such as local economic and political conditions, regulatory changes, and environmental issues. **Master Limited Partnerships:** Investments in MLPs may be adversely impacted by interest rates, tax law changes, regulation, or factors affecting underlying assets. **Passive Strategy/Index Risk:** A passive investment strategy seeking to track the performance of the underlying Index may result in the portfolio holding securities regardless of market conditions or their current or projected performance. This could cause the portfolio's returns to be lower than if the portfolio employed an active strategy. **Correlation to Index:** The performance of the portfolio and its index may vary due to factors such as flows, transaction costs, whether the portfolio obtains every security in the index, and timing differences associated with additions to and deletions from the index. **Market Price/NAV:** At the time of purchase and/or sale, an investor's shares may have a market price that is above or below the fund's NAV, which may increase the investor's risk of loss. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Price changes may be short- or long-term. Local, regional, or global events such as war (e.g., Russia's invasion of Ukraine), acts of terrorism, the spread of infectious illness (e.g., COVID-19 pandemic) or other public health issues, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio's manager(s) to invest the portfolio's assets as intended. **Prospectus:** For additional information on risks, please see the fund's prospectus.

## GLOSSARY

**30-day SEC Yield** is a standardized yield calculated according to a formula set by the SEC, and is subject to change.

**Please consider a Fund's investment objectives, risks, charges, and expenses carefully before investing. ## BENCHMARK

The Indxx Real Asset Income Index tracks the performance of US-listed securities in the Real Asset space (Real Estate, Natural Resources and Infrastructure) emphasizing dividend growth. The Index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.

IOPV, or Indicative Optimized Portfolio Value, is a calculation disseminated by the stock exchange that approximates the Fund's NAV every fifteen seconds throughout the trading day. The Fund is an exchange-traded fund ("ETF"). The "net asset value" (NAV) of the Fund is determined at the close of each business day, and represents the dollar value of one share of the Fund; it is calculated by taking the total assets of the Fund, subtracting total liabilities, and dividing by the total number of shares outstanding. The NAV of the Fund is not necessarily the same as its intraday trading value. Fund investors should not expect to buy or sell shares at NAV because shares of ETFs such as the Fund are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Thus, shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns. NAV returns are calculated using the Fund's daily 4:00 pm NAV, and include the reinvestment of all dividends and other distributions (reinvested at the Fund's NAV on distribution ex-date). Market price returns are calculated using the 4:00 pm midpoint between the bid and offer, and include the reinvestment of all dividends and other distributions (reinvested at the 4:00 pm bid/offer midpoint on distribution ex-date). Market price returns do not represent the return you would receive if you traded at other times.
