**Exchange-Traded Funds (ETF):** The value of an ETF may be more volatile than the underlying portfolio of securities it is designed to track. The costs of owning the ETF may exceed the cost of investing directly in the underlying securities. **Preferred Stocks:** Preferred stocks may decline in price, fail to pay dividends, or be illiquid. **Real Estate Investments:** The Fund may be negatively affected by factors specific to the real estate market, including interest rates, leverage, property, and management. **Industry/Sector Concentration:** A Fund that focuses its investments in a particular industry or sector will be more sensitive to conditions that affect that industry or sector than a non-concentrated Fund. **Passive Strategy/Index Risk:** A passive investment strategy seeking to track the performance of the underlying index may result in the Fund holding securities regardless of market conditions or their current or projected performance. This could cause the Fund's returns to be lower than if the Fund employed an active strategy. **Correlation to Index:** The performance of the Fund and its index may vary somewhat due to factors such as Fund flows, transaction costs, and timing differences associated with additions to and deletions from its index. **Market Volatility:** Securities in the Fund may go up or down in response to the prospects of individual companies and general economic conditions. Price changes may be short or long term. **Prospectus:** For additional information on risks, please see the Fund's prospectus.
