Morningstar ratings are based on risk-adjusted returns. Strong ratings are not indicative of positive fund performance.			Rankings are based on total return and do not include the effect of the fund's sales load, if applicable. Each fund is ranked within a universe of funds similar in portfolio characteristics and capitalization. Strong rankings are not indicative of positive fund performance.			¹ Source: Morningstar Direct	

Experience and Continuity

Longstanding Seix leveraged finance team has managed portfolios throughout multiple credit cycles with the same lead portfolio manager since inception of the strategy.

Focus on Healthier Segment of Loan Market

The Fund invests in a targeted universe of the healthiest segment of BB- and B-rated loans that have issue sizes greater than \$100 million and positive price momentum.

Excess Risk-Adjusted Return Generation

While striving to add alpha, we also seek to mitigate risk. Seix has relied on strict company selection through careful bottom-up, fundamental analysis to historically provide excess risk-adjusted returns.

“At Seix, we employ a sound, transparent, and repeatable investment process. We leverage competitive advantages and aim to capture upside potential while limiting downside risk through rigorous fundamental analysis and a strict sell discipline.”

George Goudelias
Senior Portfolio Manager, Managing Director, Head of Leveraged Finance

Loans: More than an Interest Rate Hedge

On a risk-adjusted basis, loans are attractive compared to other asset classes, such as large- and small-cap equities. The lower volatility of loans can be attributed, to some extent, to their position at the top of the capital structure, which may help mitigate risk in the face of defaults.

LOANS VS. EQUITIES (1/1/92 – 3/31/22)

	Annualized Return	Standard Deviation	Return Per Unit of Risk	Rolling 3-Year Periods		
				Best	Worst	% Negative
Leveraged Loans	5.79%	5.39%	1.0	17.5%	-8.0%	3%
Large-Cap Equity	10.38%	14.43%	0.7	32.8%	-16.1%	18%
Small-Cap Equity	9.70%	19.06%	0.5	29.6%	-17.8%	14%

Past performance is not indicative of future results.

The Leveraged Loan, Large-Cap Equity, and Small-Cap Equity markets are represented by the Credit Suisse Leveraged Loan Index, S&P 500® Index, and Russell 2000® Index, respectively. Returns were calculated using monthly data and begin with the inception of the Credit Suisse Leveraged Loan Index on 1/1/92.

Solid Long-Term Track Record

AVERAGE ANNUAL TOTAL RETURNS (%)

as of 3/31/22

Performance data quoted represents past performance. Past performance does not guarantee future results. Investment return and principal value will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Please visit virtus.com for performance data current to the most recent month end. This share class has no sales charges and is not available to all investors. Other share classes have sales charges. See virtus.com for details.

Benchmark life performance is reported from 02/28/2006.

The fund class gross expense ratio is 0.71%. The net expense ratio is 0.62%, which reflects a contractual expense reimbursement in effect through 4/30/2023.

Average annual total return is the annual compound return for the indicated period and reflects the change in share price and the reinvestment of all dividends and capital gains. Returns for periods of one year or less are cumulative returns.

GROWTH OF \$10,000 SINCE FUND INCEPTION

as of 3/31/22

This chart assumes an initial investment of \$10,000 made on 3/1/2006. As of 3/31/2022 the fund value would have been \$18,727.43. Fund performance assumes reinvestment of dividends and capital gain distributions. This growth reflects no front end sales charges.

Index: The Credit Suisse Leveraged Loan Index is a market-weighted index that tracks the investable universe of the U.S. dollar denominated leveraged loans. The index is calculated on a total return basis. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.

IMPORTANT RISK CONSIDERATIONS

Credit & Interest: Debt instruments are subject to various risks, including credit and interest rate risk. The issuer of a debt security may fail to make interest and/or principal payments. Values of debt instruments may rise or fall in response to changes in interest rates, and this risk may be enhanced with longer-term maturities. **Bank Loans:** Bank loans may be unsecured or not fully collateralized, may be subject to restrictions on resale, may be less liquid and may trade infrequently on the secondary market. Bank loans settle on a delayed basis; thus, sale proceeds may not be available to meet redemptions for a substantial period of time after the sale of the loan. **High Yield Fixed Income Securities:** There is a greater risk of issuer default, less liquidity, and increased price volatility related to high yield securities than investment grade securities. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Price changes may be short- or long-term. Local, regional or global events such as war, acts of terrorism, the spread of infectious illness or other public health issue, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio's manager(s) to invest the portfolio's assets as intended. **Prospectus:** For additional information on risks, please see the fund's prospectus.

GLOSSARY

Effective Duration: The change in the value of a fixed income security that will result from a 1% change in interest rates while taking into account the way changes in rates will affect the expected cash flows of any bond with an embedded option such as call or prepayment option. This measure assigns a probability to the exercise of a call option, where applicable, based on specified shifts in the yield curve. Duration is expressed as a number of years, and generally, the larger the duration, the greater the interest rate risk or reward for a portfolio's underlying bond prices. **Weighted Average Maturity:** The length of time until the average security in a fund will mature, be redeemed by its issuer, or paid down over time, which is the case with most securitized assets. **Alpha:** A risk-adjusted measure of an investment's excess return relative to a benchmark. **Beta:** A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. **R²:** A measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index. **Sharpe Ratio:** A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Standard Deviation:** Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk.

Please consider a Fund's investment objectives, risks, charges, and expenses carefully before investing. Ratings Distribution Methodology: The ratings issued by Nationally Recognized Statistical Rating Organizations assess the credit worthiness of a corporation's or government's debt issues. The ratings apply to the fund's holdings and not the fund. Standard & Poor's and Moody's ratings are used for all ratings-eligible securities. If ratings are available from both agencies, then the lower of the two ratings is used. If a rating is available from only one agency, then that rating will be used. If a rating is not available for a ratings-eligible security, the security is placed in the Not Rated Category. Credit ratings are subject to change. AAA, AA, A, and BBB are investment grade ratings; BB, B, CCC, CC, C, and D are below-investment grade ratings.

Morningstar: Morningstar Rating™ for funds, or 'star rating,' is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take into account the effect of sales charges and loads.
