

InfraCap REIT Preferred ETF

NYSE ARCA | NAV Symbol PFFR.NV | IOPV Symbol PFFR.IV | CUSIP 26923G400

INDEX DESCRIPTION

The InfraCap REIT Preferred ETF (Fund) tracks a modified market cap weighted index designed to provide diversified exposure to high yielding liquid preferred securities issued by real estate investment trusts (REITs) listed in the United States.

ACCESSING MARKET DISLOCATIONS WITH REIT PREFERRED

In the trailing 12 months, rapidly rising interest rates impacted the interest rate sensitive, low-coupon, and investment-grade issues. Meanwhile, the overhang of a looming recession led to increased credit concerns and subsequent declines in higher-yielding preferred issues from non-investment grade issuers. In short, the preferred market as a whole was impacted by significant downward pressures. We believe investing in preferred securities of REITs is an advantageous way to exploit market dislocations that persist and sector rotations that have arisen. We believe investors can opportunistically utilize the Fund to obtain exposure to REIT preferreds when dislocations occur.

HOW THE FUND PERFORMED

For the quarter, the Fund had a loss of -1.06% at NAV, while the Fund's benchmark, the Indxx REIT Preferred Stock Index (Benchmark Index), had a loss of -2.02%.

The Fund paid a monthly dividend of \$0.12 per share for each month of the quarter, while NAV per share at quarter-end was \$16.73 and the Fund's 30-day SEC yield¹ was 7.93%. This annualized figure reflects the dividends received during the period, minus Fund expenses. The Fund targets a dividend rate that will provide sufficient cash flows to cover the distribution.

PORTFOLIO CHANGES

Over the quarter, there were no substantial portfolio changes. The manager will deploy Fund rebalancing strategies in an effort to enhance performance relative to the Benchmark Index.

OUTLOOK

We believe REIT preferreds offer an attractive way to access market dislocations and capture opportunities within the real estate sector. We believe that inflation will decline in 2023 and investors can find discounted opportunities within the real estate sector. Global economies are continuing to return to normal operations and investors may benefit from market rotations by investing in REIT preferreds. Preferred securities continue to offer attractive yields and investors may access REIT preferreds at discounted prices.

¹ 30-day SEC yield is a standardized yield calculated according to a formula set by the SEC and is subject to change.

AVERAGE ANNUAL TOTAL RETURNS (%) as of 12/31/22

Returns for periods of less than one year are cumulative total returns.

Performance data quoted represents past results. Past performance is no guarantee of future results and current performance may be higher or lower than the performance shown. Investment return and principal value will fluctuate, so your shares, when redeemed, may be worth more or less than their original cost. Please visit virtus.com for performance data current to the most recent month-end.

The fund class gross expense ratio is 0.45%.

The Total Expense Ratio represents the Fund's Total Annual Fund Operating Expenses, which includes the management fee and other expenses where applicable, except for certain payments that are paid directly by the Fund, as described in the Prospectus.

The Fund is an exchange-traded fund ("ETF"). The "net asset value" (NAV) of the Fund is determined at the close of each business day, and represents the dollar value of one share of the Fund; it is calculated by taking the total assets of the Fund, subtracting total liabilities, and dividing by the total number of shares outstanding. The NAV of the Fund is not necessarily the same as its intraday trading value. Fund investors should not expect to buy or sell shares at NAV because shares of ETFs such as the Fund are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Thus, shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns. NAV returns are calculated using the Fund's daily 4:00 pm NAV, and include the reinvestment of all dividends and other distributions (reinvested at the Fund's NAV on distribution ex-date). Market price returns are calculated using the 4:00 pm midpoint between the bid and offer, and include the reinvestment of all dividends and other distributions (reinvested at the 4:00 pm bid/offer midpoint on distribution ex-date). Market price returns do not represent the return you would receive if you traded at other times.

Benchmark: The **Indxx REIT Preferred Stock Index** is a market cap weighted index designed to provide diversified exposure to high yielding liquid preferred securities issued by Real Estate Investment Trusts listed in the U.S. The index is calculated on a total return basis. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.

IOPV, or Indicative Optimized Portfolio Value, is a calculation disseminated by the stock exchange that approximates the Fund's NAV every fifteen seconds throughout the trading day.

Notes on Risk: Exchange-Traded Funds (ETF): The value of an ETF may be more volatile than the underlying portfolio of securities it is designed to track. The costs to the fund of owning shares of an ETF may exceed the cost of investing directly in the underlying securities. **Equity REITs:** The portfolio may be negatively affected by factors specific to the real estate market, such as interest rates, leverage, property, and management; and factors specific to investing in a pooled vehicle such as poor management and concentration risk. **Preferred Stocks:** Preferred stocks may decline in price, fail to pay dividends, or be illiquid. **Industry/Sector Concentration:** A portfolio that focuses its investments in a particular industry or sector will be more sensitive to conditions that affect that industry or sector than a non-concentrated portfolio. **Passive Strategy/Index Risk:** A passive investment strategy seeking to track the performance of the underlying Index may result in the portfolio holding securities regardless of market conditions or their current or projected performance. This could cause the portfolio's returns to be lower than if the portfolio employed an active strategy. **Correlation to Index:** The performance of the portfolio and its index may vary due to factors such as flows, transaction costs, whether the portfolio obtains every security in the index, and timing differences associated with additions to and deletions from the index. **REIT Interest Rate:** When interest rates rise, the value of REIT securities (including preferred securities) can be expected to decline. The current historically low interest rate environment increases the risk associated with rising interest rates. **Small Companies:** The market price of equity securities may be affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small or medium-sized companies may enhance that risk. **Market Price/NAV:** At the time of purchase and/or sale, an investor's shares may have a market price that is above or below the fund's NAV, which may increase the investor's risk of loss. **Non-Diversified:** The portfolio is not diversified and may be more susceptible to factors negatively impacting its holdings to the extent the portfolio invests more of its assets in the securities of fewer issuers than would a diversified portfolio. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Price changes may be short- or long-term. Local, regional, or global events such as war (e.g., Russia's invasion of Ukraine), acts of terrorism, the spread of infectious illness (e.g., COVID-19 pandemic) or other public health issues, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio's manager(s) to invest the portfolio's assets as intended. **Prospectus:** For additional information on risks, please see the fund's prospectus.
