THREE GOALS, ONE SOLUTION: A LOOK AT INVESTOR INCOME PROFILES

1 Investors looking for growth: These individuals may be farther from retirement but still need growth potential; they're aiming to accumulate and build assets.

How to pursue this goal:

An investor can benefit from equity-like returns and lower volatility by reinvesting total distributions.

This will boost the overall number of shares held and grow the principal investment while furthering the value of compounding.

**Total investment value:
\$315,759**

REINVESTING TOTAL INCOME DISTRIBUTION

2 Investors looking for income and growth: These individuals may be near retirement and facing changes in income; they're aiming to implement a more conservative equity allocation policy.

How to pursue this goal:

By doing two things—reinvesting some distributions while taking a 4% withdrawal—an investor can benefit from moderate income while continuing to grow the principal investment.

**Portfolio value:
\$171,169**

**4% withdrawal:
\$70,298**

IMPORTANT RISK CONSIDERATIONS

Market Volatility: Local, regional, or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio manager(s) to invest the portfolio's assets as intended. **Issuer Risk:** The portfolio will be affected by factors specific to the issuers of securities and other instruments in which the portfolio invests, including actual or perceived changes in the financial condition or business prospects of such issuers. **High Yield Fixed Income Securities:** There is a greater risk of issuer default, less liquidity, and increased price volatility related to high yield securities than investment grade securities. **Equity Securities:** The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small or medium-sized companies may enhance that risk. **Unrated Fixed Income Securities:** If the quality of an unrated fixed income security is not accurately assessed, the portfolio may invest in a security with greater risk than intended. **Debt Instruments:** Debt instruments are subject to greater levels of credit and liquidity risk, may be speculative and may decline in value due to changes in interest rates or an issuer's or counterparty's deterioration or default. **Derivatives:** Investments in derivatives such as futures, options, forwards, and swaps may increase volatility or cause a loss greater than the principal investment. **Convertible Securities:** A convertible security may be called for redemption at a time and price unfavorable to the portfolio. **Prospectus:** For additional information on risks, please see the fund's prospectus.

The **Bloomberg Barclays U.S. Aggregate Bond Index** measures the U.S. investment grade fixed rate bond market. The **S&P 500® Index** is a free-float market-capitalization weighted index of 500 of the largest U.S. companies. The index is unmanaged, its return does not reflect any fees, expenses, or sales charges, and it is not available for direct investment. The indexes are calculated on a total return basis with net dividends reinvested. The indexes are unmanaged, their returns do not reflect any fees, expenses, or sales charges, and are not available for direct investment.

The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take into account the effects of sales charges and loads.
