

Mid Cap Growth Portfolio

First Quarter 2024 | Managed Accounts

Portfolio Overview

The Mid Cap Growth portfolio underperformed the Russell Midcap Growth Index in the first quarter. Poor stock selection and an underweight in financials and poor stock selection in consumer discretionary detracted from performance. Good stock selection in consumer staples and energy contributed positively to performance.

The biggest contributors to performance during the quarter were Celsius and Diamondback Energy. Celsius's distribution agreement with another well-known soft drink company aided performance along with its branding execution and innovation. The company's new beverage line geared for the fitness community is also achieving sales results. In addition, international product launches are strong through a distribution partner in the United Kingdom, France, Australia, and New Zealand. During the quarter, Diamondback Energy announced a new acquisition which we believe is a strong new asset. The deal makes the company a top producer with a high-quality asset base and a track record of strong operational execution. Other top contributors included Amphenol, Freshpet, and Fair Isaac.

The biggest detractors to performance during the quarter were MarketAxess Holdings and Goosehead Insurance. Over the last few years, we believe MarketAxess's competitive advantage has deteriorated. The company's gains in fixed income trading appear to be more cyclical than durable. As a result, we sold our position. In February, Goosehead Insurance reported a sharp deceleration in revenue. Shares continued to fall in March after the National Association of Realtors reached a settlement agreement that prohibits buyer broker compensation information on the MLS and requires buyers to sign an agreement with their realtor. Buyer's agents typically play a large role in recommending insurance and are targeted by Goosehead for referrals. In places like Australia, where buyer agents are very lightly used, buyers rely more on direct carrier relationships. However, with only a small percentage of total revenue exposed to new premiums from new mortgages, we believe this change should be manageable. However, what we believe is more important to monitor is, the once-in-a-decade premium increases pushed through by carriers over the last 12 months that flowed through to the company's income statement. Other bottom contributors included Zoetis, BILL Holdings, and MongoDB.

Outlook

One large challenge coming out of the pandemic is trying to parse the underlying strength in the economy. Our supply chains were whipsawed, our employment patterns changed dramatically, and we saw unprecedented monetary and fiscal support. Given these factors, it is hard to gauge how much of the strength in the U.S. economy is due to fundamentals versus other exogenous effects. And while interest rates have increased materially in a short period of time, they are only modestly restrictive compared to the long-run average. As a result of low rates and strong government support during the pandemic, we believe the tide lifted all companies and made it easier for everyone to prosper. However, without this assistance, we expect that more fundamental factors will drive corporate profits and thus equity performance going forward. Assuming less exogenous support, we believe companies who are competitively advantaged with better profitability, cash flow, as well as lower leverage will be able to better distinguish themselves going forward.

*KAR utilizes the interquartile method when calculating Debt/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers—only the extreme ends are excluded—and that it can be applied consistently as a quantitative method for most fundamental characteristics. Debt/EBITDA utilizes net debt for the calculation.

†Free cash flow data is as of December 31, 2023. Prices are as of March 31, 2024. Excludes financials.

Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.**

Peer Comparison Chart

Five Years Ending March 31, 2024

The eVestment Mid Cap Growth Universe includes 80 managers categorized in the mid cap growth asset class by eVestment. KAR does not pay any fees to be included in the eVestment Mid Cap Growth Universe or for the ranking itself. KAR does pay fees for the use of certain products and services provided by eVestment. eVestment rankings are based on gross of fee returns. Gross of fee returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Management fees are described in KAR's Form ADV Part 2A, which is available upon request and can also be found at <https://kayne.com/wp-content/uploads/ADV-Part-2A.pdf>. Returns could be reduced or losses incurred due to currency fluctuations. **Past performance is no guarantee of future results.**

IMPORTANT RISK CONSIDERATIONS: **Equity Securities:** The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small, medium, or large-sized companies may enhance that risk. **Technology Concentration:** Because the portfolio is presently heavily weighted in the technology sector, it will be impacted by that sector's performance more than a portfolio with broader sector diversification. **Limited Number of Investments:** Because the portfolio has a limited number of securities, it may be more susceptible to factors adversely affecting its securities than a portfolio with a greater number of securities. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Local, regional, or global events such as war or military conflict, terrorism, pandemic, or recession could impact the portfolio, including hampering the ability of the portfolio's manager(s) to invest its assets as intended.

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2023.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Mid Cap Growth Wrap Composite has had a performance examination for the period from January 1, 2012 through December 31, 2023. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a

variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary Mid Cap Growth Wrap Portfolios. Mid Cap Growth Wrap Portfolios are invested in equity securities with market capitalizations consistent with the Russell Midcap® Growth Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low debt balance sheets. For comparison purposes, the composite is measured against the Russell Midcap® Growth Index. The Russell Midcap® Growth Index is a market capitalization-weighted index of growth-oriented stocks of the 800 smallest companies in the Russell 1000® Index, which comprises the 1,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is January 2012. The composite was created in May 2021. Prior to April 2024, the name of the composite was the Mid Cap Sustainable Growth Wrap Composite. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

For periods from January 2012 through April 2021, the composite calculations have been linked to the

firm's Mid Cap Growth actual historical non-wrap fee composite performance. All portfolios included in this composite after April 2021 are wrap portfolios.

The standard wrap fee schedule in effect is 3.00% on total assets. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Performance results include the reinvestment of all income. Effective May 2021, pure gross returns do not reflect the deduction of any expenses, including trading costs. Net annual returns are calculated by deducting 1/12th of an assumed maximum annual wrap fee of 3% on a monthly basis. Wrap fees include all charges for trading costs, portfolio management, custody and other administrative expenses.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using pure gross returns) and the benchmark for the 36-month period.

GLOSSARY

Alpha: A risk-adjusted measure of an investment's excess return relative to a benchmark. Beta: A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. R2: A measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index. Sharpe Ratio: A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk.

INDEX DEFINITION

The Russell Midcap® Growth Index is a market capitalization-weighted index of medium-capitalization, growth-oriented stocks of U.S. companies. The index is calculated on a total return basis with dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
