

Mid Cap Sustainable Growth Portfolio

Third Quarter 2023 | Managed Accounts

Portfolio Overview

The Mid Cap Sustainable Growth portfolio outperformed the Russell Midcap Growth Index in the third quarter. Good stock selection in consumer staples and good stock selection and an underweight in health contributed positively to performance. Poor stock selection in information technology and poor stock selection in industrials detracted from performance.

The biggest contributors to performance during the quarter were Celsius and Goosehead Insurance.

- Celsius reported a strong quarter with a significant increase in sales growth. We believe the landmark distribution deal with a national beverage brand is bearing fruit with plans to leverage the brand's international distribution capabilities overseas.
- Goosehead Insurance initiated a plan a little less than a year ago to increase sales productivity, especially in the franchisee channel, and de-emphasize the corporate agent channel. Gains from that initiative are accelerating with sales productivity up in the most recent quarter. After eliminating unproductive corporate agents, we believe the company has the systems in place to better train and recruit going forward. As a result, the company's penetration into new mortgage real estate transactions reached a record in the most recent quarter despite plunging volumes for mortgages overall.
- Other top contributors included Diamondback Energy, Fair Isaac, and Halliburton.

The biggest detractors to performance during the quarter were Paycom Software and Equifax.

- Despite a slowdown in hiring, Paycom Software's revenue growth had remained strong driven by upsells to existing customers and landing new, larger customers. That growth is decelerating now, leading to smaller outperformance versus consensus and taking the share price down in the process. Part of the slowdown is intentional as the company has instructed its sales team to prioritize upselling its BETI module to customers. BETI is a self-service payroll tool allowing employees to review pay for accuracy prior to running payroll, which reduces errors and saves HR and accounting teams hours of labor each pay period.
- Equifax is facing dual headwinds from the mortgage and hiring markets. The company outperformed the decline in mortgage originations but saw some originators perform more verifications in-house due to lower activity levels. Non-mortgage verification is the largest part of the company's Workforce Solutions, providing employment and income verification. Demand for these services has slowed alongside hiring and consumer credit demand causing the company to reduce its revenue growth estimates for 2023.
- Other bottom contributors included DoubleVerify, Mettler-Toledo International, and MongoDB.

Outlook

Despite the pullback in equities this quarter, we believe many stocks are attractively positioned for future growth at reasonable prices. Investors in the short run have continued to pour money into money market accounts yielding over 5% but we believe this is likely to be a short-term opportunity as inflation eases over the next 12 months. Despite the slowing economy over the last two years, corporate earnings have been barely dented, even with COVID dislocations and dramatic interest rate increases. Therefore, we continue to believe the S&P 500 bottomed last October, which, in our view, should incentivize investors to stay put in these more uncertain and controversial times.

*KAR utilizes the interquartile method when calculating Debt/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers—only the extreme ends are excluded—and that it can be applied consistently as a quantitative method for most fundamental characteristics. Debt/EBITDA utilizes net debt for the calculation.

†Free cash flow data is as of June 30, 2023. Prices are as of September 30, 2023. Excludes financials.

Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.**

Peer Comparison Chart

Five Years Ending September 30, 2023

The eVestment Mid Cap Growth Universe includes 92 managers categorized in the mid cap growth asset class by eVestment. KAR does not pay any fees to be included in the eVestment Mid Cap Growth Universe or for the ranking itself. KAR does pay fees for the use of certain products and services provided by eVestment. eVestment rankings are based on gross of fee returns. Gross of fee returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Management fees are described in KAR's Form ADV Part 2A, which is available upon request and can also be found at <https://kayne.com/wp-content/uploads/ADV-Part-2A.pdf>. Returns could be reduced or losses incurred due to currency fluctuations. **Past performance is no guarantee of future results.**

IMPORTANT RISK CONSIDERATIONS: Equity Securities: The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small, medium, or large-sized companies may enhance that risk. **Technology Concentration:** Because the portfolio is presently heavily weighted in the technology sector, it will be impacted by that sector's performance more than a portfolio with broader sector diversification. **Limited Number of Investments:** Because the portfolio has a limited number of securities, it may be more susceptible to factors adversely affecting its securities than a portfolio with a greater number of securities. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Local, regional, or global events such as war or military conflict, terrorism, pandemic, or recession could impact the portfolio, including hampering the ability of the portfolio's manager(s) to invest its assets as intended.

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2022. The verification reports are available upon request.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

Verification does not provide assurance on the accuracy of any specific performance report.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies

focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary Mid Cap Sustainable Growth Wrap Portfolios. Mid Cap Sustainable Growth Wrap Portfolios are invested in equity securities with market capitalizations consistent with the Russell Midcap® Growth Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low debt balance sheets. For comparison purposes, the composite is measured against the Russell Midcap® Growth Index. The Russell Midcap® Growth Index is a market capitalization-weighted index of growth-oriented stocks of the 800 smallest companies in the Russell 1000® Index, which comprises the 1,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is January 2012. The composite was created in June 2021. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

For periods from January 2012 through April 2021, the composite calculations have been linked to the firm's Mid Cap Sustainable Growth actual historical non-wrap fee composite performance. All portfolios

included in this composite after April 2021 are wrap portfolios.

The standard wrap fee schedule in effect is 3.00% on total assets. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Performance results include the reinvestment of all income. Pure gross returns do not reflect the deduction of any expenses, including trading costs. Net annual returns are calculated by deducting 1/12th of an assumed maximum annual wrap fee of 3% on a monthly basis. Wrap fees include all charges for trading costs, portfolio management, custody and other administrative expenses.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation, which measures the variability of the composite (using pure gross returns) and the benchmark for the 36-month period, is not presented for periods prior to 2014 because 36 monthly composite returns are not available.

GLOSSARY

Alpha: A risk-adjusted measure of an investment's excess return relative to a benchmark. Beta: A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. R2: A measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index. Sharpe Ratio: A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk.

INDEX DEFINITION

The Russell Midcap® Growth Index is a market capitalization-weighted index of medium-capitalization, growth-oriented stocks of U.S. companies. The index is calculated on a total return basis with dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
