

INVESTMENT OVERVIEW

The Fund seeks to maximize total return, which consists of income on its investments and capital appreciation, by investing in a portfolio of emerging markets debt instruments.

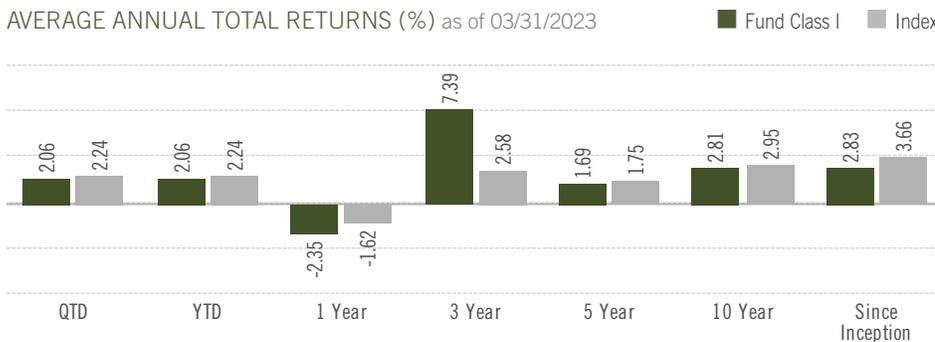

KEY FEATURES

Rigorous Credit Analysis — Value-oriented, bottom-up analysis is utilized to approach emerging markets corporate investing with the mindset of a private lender, focusing on balance sheet strength, long-term cash flow generation, margin sustainability, and capital structure

Pioneers in Risk Analytics — Proprietary platform enables continuous monitoring of portfolio risk exposures in reaction to changing market conditions

Depth of Experience in EMD — Stone Harbor’s demonstrated ability in managing emerging markets debt is rooted in teamwork with a 30-year history, a disciplined research and investment process, and the experience to make what are believed to be sound investment judgments

AVERAGE ANNUAL TOTAL RETURNS (%) as of 03/31/2023

Performance data quoted represents past performance. Past performance does not guarantee future results. Investment return and principal value will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Please visit virtus.com for performance data current to the most recent month end. This share class has no sales charges and is not available to all investors. Other share classes have sales charges. See virtus.com for details.

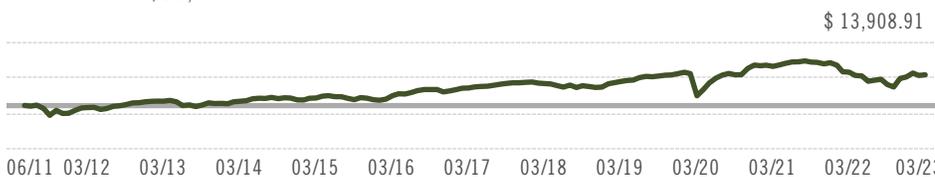

The fund class gross expense ratio is 3.15%. The net expense ratio is 1.01%, which reflects a contractual expense reimbursement in effect through 4/7/2024.

Average annual total return is the annual compound return for the indicated period and reflects the change in share price and the reinvestment of all dividends and capital gains. Returns for periods of one year or less are cumulative returns.

ANNUAL PERFORMANCE (%)

	2022	2021	2020	2019	2018	2017	2016	2015	2014	2013
Fund	-11.76	1.95	7.75	13.93	-4.69	9.28	10.46	0.17	4.29	-1.89
Index	-12.26	0.91	7.13	13.09	-1.65	7.96	9.65	1.30	4.96	-0.60

GROWTH OF \$10,000

This chart assumes an initial investment of \$10,000 made on 6/1/2011. As of 3/31/2023 the fund value would have been \$13,908.91. Fund performance assumes reinvestment of dividends and capital gain distributions. This growth reflects no front end sales charges.

Effective January 30, 2023, this Fund’s name has changed.

Weightings are subject to change.

Weightings may not add up to 100% as a result of the use of certain financial instruments, including derivatives, which may be used to gain or reduce market exposure and/or for risk management purposes.

IMPORTANT RISK CONSIDERATIONS

Emerging Markets Investing: Emerging markets securities may be more volatile, or more greatly affected by negative conditions, than those of their counterparts in more established foreign markets. **Foreign Investing:** Investing in foreign securities subjects the portfolio to additional risks such as increased volatility; currency fluctuations; less liquidity; less publicly available information about the foreign investment; and political, regulatory, economic, and market risk. **Credit & Interest:** Debt instruments are subject to various risks, including credit and interest rate risk. The issuer of a debt security may fail to make interest and/or principal payments. Values of debt instruments may rise or fall in response to changes in interest rates, and this risk may be enhanced with longer-term maturities. **Counterparties:** There is risk that a party upon whom the portfolio relies to complete a transaction will default. **Currency Rate:** Fluctuations in the exchange rates between the U.S. dollar and foreign currencies may negatively affect the value of the portfolio's shares. **Derivatives:** Derivatives may include, among other things, futures, options, forwards and swap agreements and may be used in order to hedge portfolio risks, create leverage, or attempt to increase returns. Investments in derivatives may result in increased volatility and the portfolio may incur a loss greater than its principal investment. **High Yield Fixed Income Securities:** There is a greater risk of issuer default, less liquidity, and increased price volatility related to high yield securities than investment grade securities. **Liquidity:** Certain instruments may be difficult or impossible to sell at a time and price beneficial to the portfolio. **Income:** Income received from the portfolio may vary widely over the short- and long-term and/or be less than anticipated if the proceeds from maturing securities in the portfolio are reinvested in lower-yielding securities. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Local, regional, or global events such as war, terrorism, pandemic, or recession could impact the portfolio, including hampering the ability of the portfolio's manager(s) to invest its assets as intended. **Prospectus:** For additional information on risks, please see the fund's prospectus.

GLOSSARY

Effective Duration: The change in the value of a fixed income security that will result from a 1% change in interest rates while taking into account the way changes in rates will affect the expected cash flows of any bond with an embedded option such as call or prepayment option. This measure assigns a probability to the exercise of a call option, where applicable, based on specified shifts in the yield curve. Duration is expressed as a number of years, and generally, the larger the duration, the greater the interest rate risk or reward for a portfolio's underlying bond prices. **Weighted Average Life:** The length of time to repayment of principal on a security whereby the time to each principal payment is weighted by the proportional size of the corresponding payment. **Alpha:** A risk-adjusted measure of an investment's excess return relative to a benchmark. **Beta:** A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. **R²:** A measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index. **Sharpe Ratio:** A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Standard Deviation:** Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk.

INDEX DEFINITION

Index: The J.P. Morgan CEMBI Broad Diversified Index tracks total returns for U.S. dollar denominated debt instruments issued by corporate entities in emerging markets countries. The benchmark limits the current face amount allocations of the bonds in the CEMBI Broad by constraining the total face amount outstanding for countries with larger debt stocks. Qualifying corporate bonds have a face amount greater than USD 300 million, maturity greater than 5 years, verifiable prices and cash flows, and from countries with Asia ex Japan, Latin America, Eastern Europe, Middle East, and Africa. The index is calculated on a total return basis. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.

RATINGS DISTRIBUTION METHODOLOGY

The ratings issued by Nationally Recognized Statistical Rating Organizations assess the credit worthiness of a corporation's or government's debt issues. The ratings apply to the fund's holdings and not the fund. Ratings are provided by Standard & Poor's, Moody's, and Fitch. In determining the average credit quality of a security, Stone Harbor uses the following hierarchy: S&P; if S&P is unavailable, Moody's; if Moody's is unavailable, Fitch. If no rating is available, Stone Harbor applies its internal rating methodology to assign a rating. A security that has not been assigned a credit rating through Stone Harbor's methodology is listed as 'not rated'. Ratings have been converted to the equivalent S&P rating category. Cash and currency forwards generally are assigned the AAA rating. Credit ratings are subject to change. AAA, AA, A, and BBB are investment grade ratings; BB, B, CCC, CC, C, and D are below-investment grade ratings.

Morningstar Rating™ for funds, or 'star rating,' is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take into account the effect of sales charges and loads.
