

Small Cap Core Portfolio

First Quarter 2024 | Managed Accounts

Portfolio Review

The Small Cap Core portfolio outperformed the Russell 2000 Index in the first quarter. Good stock selection and an overweight in industrials and good stock selection in financials contributed positively to performance. Poor stock selection and an underweight in information technology and an underweight in energy detracted from performance.

The biggest contributors to performance during the quarter were EMCOR and Primerica.

- EMCOR Group continues to generate strong revenue and growth driven by increased demand from datacenter, high-tech manufacturing, electrification, healthcare, and reshoring projects.
- Primerica's earnings advanced due to healthy recruiting activity and sales productivity in the company's life insurance business, rising client asset values in the investments segment, and reduced losses in the senior health segment.
- Other top contributors included Manhattan Associates, Kadant, and FTI Consulting.

The biggest detractors from performance during the quarter were Clearwater Analytics and BancFirst.

- Clearwater Analytics reported a good quarter of bookings, revenue growth, and profit growth. Shares nonetheless declined due to management providing guidance for growth below market expectations.
- BancFirst's shares, like many other regional banks, moved lower in the quarter as investors became less certain of when the Federal Reserve will start cutting interest rates. Positively, the bank's quarterly results showed continued stability in deposits and no credit issues.
- Other bottom contributors included RBC Bearings, Toro, and Rightmove.

Purchases and Sales

During the quarter, there were no new purchases or complete sales from the portfolio.

Outlook

One large challenge coming out of the pandemic is trying to parse the underlying strength in the economy. Our supply chains were whipsawed, our employment patterns changed dramatically, and we saw unprecedented monetary and fiscal support. Given these factors, it is hard to gauge how much of the strength in the U.S. economy is due to fundamentals versus other exogenous effects. And while interest rates have increased materially in a short period of time, they are only modestly restrictive compared to the long-run average. As a result of low rates and strong government support during the pandemic, we believe the tide lifted all companies and made it easier for everyone to prosper. However, without this assistance, we expect that more fundamental factors will drive corporate profits and thus equity performance going forward. Assuming less exogenous support, we believe companies who are competitively advantaged with better profitability, cash flow, as well as lower leverage will be able to better distinguish themselves going forward.

Annualized Standard Deviation—Since Inception‡	16.0%	20.7%

*KAR utilizes the interquartile method when calculating Debt/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers—only the extreme ends are excluded—and that it can be applied consistently as a quantitative method for most fundamental characteristics. Debt/EBITDA utilizes net debt for the calculation.

†Free cash flow data is as of December 31, 2023. Prices are as of March 31, 2024. Excludes financials.

‡April 1, 1992. Standard deviation for the KAR strategy is based on net-of-fee returns. This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

IMPORTANT RISK CONSIDERATIONS: **Equity Securities:** The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small, medium, or large-sized companies may enhance that risk. **Industrial Concentration:** Because the portfolio is presently heavily weighted in the industrial sector, it will be impacted by that sector's performance more than a portfolio with broader sector diversification. **Limited Number of Investments:** Because the portfolio has a limited number of securities, it may be more susceptible to factors adversely affecting its securities than a portfolio with a greater number of securities. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Local, regional, or global events such as war or military conflict, terrorism, pandemic, or recession could impact the portfolio, including hampering the ability of the portfolio's manager(s) to invest its assets as intended.

*April 1, 1992

[†]All periods less than one year are total returns and are not annualized. Returns are final. Returns could be reduced, or losses incurred, due to currency fluctuations.

[‡]Net of all fees and expenses. Assumes a 3% annual fee.

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2023.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Small Cap Core Wrap Composite has had a performance examination for the period from January 1, 1999 through December 31, 2023. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not

imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary Small Cap Core Wrap Portfolios. Small Cap Core Wrap Portfolios are invested in equity securities with market capitalizations consistent with the Russell 2000® Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Index. The Russell 2000® Index is a market capitalization-weighted index of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is April 1992. The composite was created in October 1995. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

Beginning on January 1, 2006, sub-advisory wrap fee portfolios are also included in composite results. Each sub-advisory relationship is included in the

composite as one account. All portfolios included in this composite for all periods are wrap portfolios.

The standard wrap fee schedule in effect is 3.00% on total assets. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Performance results include the reinvestment of all income. Pure gross returns do not reflect the deduction of any expenses, including trading costs. Net annual returns are calculated by deducting 1/12th of an assumed maximum annual wrap fee of 3% on a monthly basis. Wrap fees include all charges for trading costs, portfolio management, custody and other administrative expenses.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using pure gross returns) and the benchmark for the 36-month period.

GLOSSARY

Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk. **Alpha:** A risk-adjusted measure of an investment's excess return relative to a benchmark. **Sharpe Ratio:** A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Information Ratio:** The information ratio (IR) is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Beta:** A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. **Downside Capture Ratio:** A statistical measure of an investment manager's overall performance in down-markets. It is used to evaluate how well an investment manager performed relative to an index during periods when that index has dropped.

Tracking Error: The divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. It is reported as a standard deviation percentage difference, which reports the difference between the return an investor receives and that of the benchmark they were attempting to imitate.

INDEX DEFINITION

The Russell 2000® Index is a market capitalization-weighted index of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total return basis with dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
