

Small Cap Core Portfolio

Third Quarter 2021 | Managed Accounts

Portfolio Review

The Small Cap Core portfolio outperformed the Russell 2000 Index in the third quarter. Good stock selection and an underweight in health care and good stock selection and an overweight in financials contributed positively to performance. Poor stock selection and an underweight in energy and an underweight in real estate detracted from performance.

The biggest contributors to performance during the quarter were Watts Water Technologies and FactSet Research Systems.

- Watts Water benefitted from the ongoing repair and replacement cycle brought on due to the freeze in the southern United States. Increased volumes and additional cost actions have also improved the company's profitability.
- In its latest reported quarter, FactSet reported an expansion of its sales across its customers. We view the company's competitive position as robust and remain owners of the business.
- Other top contributors included Moelis, Manhattan Associates and RBC Bearings.

The biggest detractors to performance during the quarter were Autohome and Toro.

- Autohome's shares declined due to heightened regulatory scrutiny by the Chinese government over technology businesses, weakening new car sales owing to semiconductor shortages, as well as management turnover and intensifying competitive pressure.
- Toro continues to experience robust demand for its products, but inflation and supply-chain issues have surfaced recently, which have weighed on share-price performance.
- Other bottom contributors included Aspen Technology, Dril-Quip and Graco.

Purchases and Sales

During the quarter, we purchased Clearwater Analytics. There were no complete sales in the portfolio.

- Clearwater Analytics provides investment accounting software. The software is used by asset managers, corporate treasuries and insurance companies for daily reconciliation of their holdings. The company specializes in reconciling more esoteric securities, where the need for accurate data is harder to obtain without scale.

Outlook

We believe the two most important variables affecting equity markets are interest rates and corporate profitability. The Federal Reserve will start tapering their purchases of bonds next month, but this has been well telegraphed to investors. Relatively benign interest rates and strong corporate profitability are a prescription for rising equity prices over time. However, we believe investors should expect a more selective market going forward and more muted equity returns. It is more likely that we will continue to grow but at a more moderate and sustainable pace. We believe this should be an environment where stocks of high-quality businesses can perform well.

Manager of the Decade for the last 6 years (2015 - 2020)

IMPORTANT RISK CONSIDERATIONS: Equity Securities: The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small or medium-sized companies may enhance that risk. **Limited Number of Investments:** Because the portfolio has a limited number of securities, it may be more susceptible to factors adversely affecting its securities than a portfolio with a greater number of securities. **Market Volatility:** Local, regional, or global events such as war, acts of terrorism, the speed of infectious illness or other public health issues, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio manager(s) to invest the portfolio's assets as intended.

The Russell 2000® Index is a trademark/service mark of Frank Russell Company. Russell® is a trademark of Frank Russell Company.

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2019.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS® standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS® standards. The Small Cap Core Wrap Composite has been examined for the period from January 1, 1999 through December 31, 2019. The verification and performance examination reports are available upon request.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary Small Cap Core Wrap Portfolios. Small Cap Core Wrap Portfolios are invested in equity securities with market capitalizations consistent with the Russell 2000® Index, that have market control, rising free cash flow,

shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Index. The Russell 2000® Index is a market capitalization-weighted index of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The composite was created in October 1995. A list of composite descriptions and policies for valuing portfolios, calculating performance and preparing compliant presentations are available upon request.

Beginning on January 1, 2006, sub-advisory wrap fee portfolios are also included in composite results. Each sub-advisory relationship is included in the composite as one account. Prior to January 1, 2011, accounts that experienced a significant cash flow, defined as aggregate flows that exceed 25% of the account's beginning of period market value, were temporarily removed from the composite. Prior to January 1, 2011, the composite minimum was \$100,000.

The standard wrap fee schedule in effect is 3.00% on total assets. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part IIA of Form ADV, which is available on request. The performance information is supplied for reference. Past performance

is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Performance results include the reinvestment of all income. Pure gross returns do not reflect the deduction of any expenses, including trading costs. Prior to December 31, 2005, net annual returns are calculated by deducting 1/4th of an assumed maximum annual wrap fee of 3% on a quarterly basis. Beginning January 1, 2006, net annual returns are calculated using actual fees incurred. If no fee data is provided by wrap sponsors, the maximum annual wrap fee of 3% is used to calculate net of fee performance. Beginning January 1, 2016, net annual returns are calculated by deducting 1/12th of an assumed maximum annual wrap fee of 3% on a monthly basis. Wrap fees include all charges for trading costs, portfolio management, custody and other administrative expenses.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation, which measures the variability of the composite (using pure gross returns) and the benchmark for the 36-month period, is presented starting 2012 because prior to January 1, 2010, the composite return was calculated quarterly and 36 monthly returns are not available.
