

## Small Cap Core Portfolio

### Second Quarter 2023 | Managed Accounts

#### Portfolio Review

The Small Cap Core portfolio outperformed the Russell 2000 Index in the second quarter. Good stock selection in financials and good stock selection and an underweight in consumer discretionary contributed positively to performance. Poor stock selection and an underweight in health care and information technology detracted from performance.

The biggest contributors to performance during the quarter were Simpson Manufacturing and Manhattan Associates. Simpson Manufacturing experienced strong performance in the most recent quarter following the company's reports of better-than-expected operating results and improved profitability. We believe Simpson's recent acquisition of a French-based company should also support the company's market position and profitability in Europe. Manhattan Associates reported strong sales and growth in the quarter, with profit margin expansion. The company's progress has not been impacted by macroeconomic uncertainty. This continued strength relative to expectations caused the shares to perform strongly. Other top contributors included EMCOR Group, Primerica, and Graco.

The biggest detractors from performance during the quarter were Aspen Technology and Teledyne Technologies. After several quarters of positive comments from management, Aspen Technology's earnings guidance for the year was cut due to unforeseen issues integrating recently acquired businesses and a softening macroeconomic environment. The unexpected change in guidance resulted in a sell-off in the stock. Teledyne Technologies' shares fell in the second quarter despite seeing solid revenue growth in all its segments with margins somewhat impacted by supply chain issues. Other bottom contributors included Toro, First Hawaiian, and FTI Consulting.

#### Purchases and Sales

During the quarter, we purchased Kforce Technology and we sold AptarGroup and Teledyne Technologies. Kforce provides professional and technical staffing services and solutions. The company operates through the Technology and Finance & Accounting segments. With approximately 3,000 clients and a talent database covering over 8 million individuals, we believe Kforce benefits from two-sided network effects that enables it to place talent at scale. AptarGroup's revenue growth has been modest over the past several years reflecting substantial growth in its "Pharma" segment offsetting lackluster results in its largest "Beauty + Home" segment. Pharma will soon become the company's largest business. However, aggregate profitability has diminished amid this changing segment contribution with return on capital now in the single digits. This made us question AptarGroup's ability to capture attractive pricing in its Pharma business. The stock's high P/E presumably reflected the market's anticipation of accelerating growth as Pharma becomes a more significant driver of total revenue. We were unenthused though given the declining profitability and therefore sold our holdings. We sold Teledyne Technologies as the company's \$19 billion market capitalization outgrew our small cap mandate.

#### Outlook

Inflation data continues to head in the right direction, which we believe may set the stage for little to no further short-term interest rate increases from here. If you exclude the P/E ratios of the top 7 companies in the S&P 500 Index, valuations decline to the 13-to-17x earnings for the rest of the market. This valuation backdrop can help offset any mild decline in earnings even if the economy does slip into a mild or shallow recession. We have seen some improvements in breadth over the last half of this quarter, but not robust enough yet to call it a trend. If breadth expands, this would be a positive sign for equities.

#### Portfolio Highlights

**Style:** Small Cap  
**Sub-Style:** Core

Annualized Standard Deviation—Since Inception‡	16.1%	20.8%

\*KAR utilizes the interquartile method when calculating Debt/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers—only the extreme ends are excluded—and that it can be applied consistently as a quantitative method for most fundamental characteristics. Debt/EBITDA utilizes net debt for the calculation.

†Free cash flow data is as of March 31, 2023. Prices are as of June 30, 2023. Excludes financials.

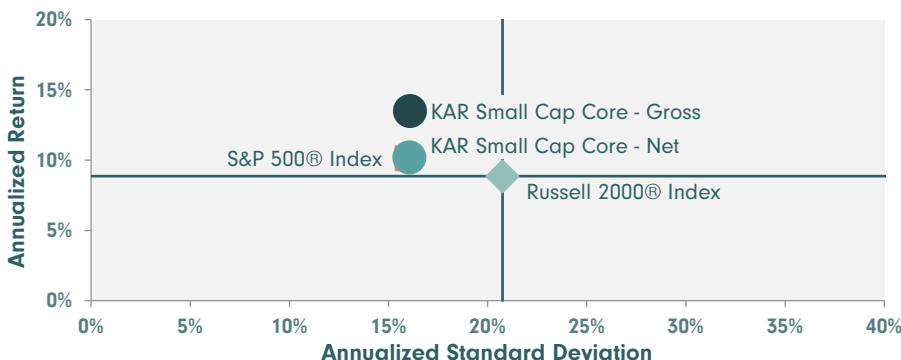

‡April 1, 1992. Standard deviation for the KAR strategy is based on net-of-fee returns. This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

**IMPORTANT RISK CONSIDERATIONS: Equity Securities:** The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small or medium-sized companies may enhance that risk. **Limited Number of Investments:** Because the portfolio has a limited number of securities, it may be more susceptible to factors adversely affecting its securities than a portfolio with a greater number of securities. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Price changes may be short- or long-term. Local, regional, or global events such as war or military conflict (e.g., Russia's invasion of Ukraine), acts of terrorism, the spread of infectious illness (e.g., COVID-19 pandemic) or other public health issues, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio's manager(s) to invest the portfolio's assets as intended.

## Peer Comparison Chart

Ten Years Ending June 30, 2023

● KAR Small Cap Core ● Russell 2000<sup>®</sup> Index

The eVestment Small Cap Core Universe includes 111 managers categorized in the small cap core asset class by eVestment. KAR does not pay any fees to be included in the eVestment Small Cap Core Universe or for the ranking itself. KAR does pay fees for the use of certain products and services provided by eVestment. eVestment rankings are based on gross of fee returns. Gross of fee returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Management fees are described in KAR's Form ADV Part 2A, which is available upon request and can also be found at <https://kayne.com/wp-content/uploads/ADV-Part-2A.pdf>. Returns could be reduced or losses incurred due to currency fluctuations. **Past performance is no guarantee of future results.**

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2022.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Small Cap Core Wrap Composite has had a performance examination for the period from January 1, 1999 through December 31, 2022. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not

imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary Small Cap Core Wrap Portfolios. Small Cap Core Wrap Portfolios are invested in equity securities with market capitalizations consistent with the Russell 2000® Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Index. The Russell 2000® Index is a market capitalization-weighted index of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is April 1992. The composite was created in October 1995. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

Beginning on January 1, 2006, sub-advisory wrap fee portfolios are also included in composite results. Each sub-advisory relationship is included in the

composite as one account. All portfolios included in this composite for all periods are wrap portfolios.

The standard wrap fee schedule in effect is 3.00% on total assets. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Performance results include the reinvestment of all income. Pure gross returns do not reflect the deduction of any expenses, including trading costs. Net annual returns are calculated by deducting 1/12th of an assumed maximum annual wrap fee of 3% on a monthly basis. Wrap fees include all charges for trading costs, portfolio management, custody and other administrative expenses.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using pure gross returns) and the benchmark for the 36-month period.

#### GLOSSARY

**Standard Deviation:** Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk. **Alpha:** A risk-adjusted measure of an investment's excess return relative to a benchmark. **Sharpe Ratio:** A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Information Ratio:** The information ratio (IR) is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Beta:** A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. **Downside Capture Ratio:** A statistical measure of an investment manager's overall performance in down-markets. It is used to evaluate how well an investment manager performed relative to an index during periods when that index has dropped.

**Tracking Error:** The divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. It is reported as a standard deviation percentage difference, which reports the difference between the return an investor receives and that of the benchmark they were attempting to imitate.

#### INDEX DEFINITION

The Russell 2000® Index is a market capitalization-weighted index of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total return basis with dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
