

Small Cap Core Portfolio

Third Quarter 2022 | Managed Accounts

Portfolio Review

The Small Cap Core portfolio performed in line with the Russell 2000 Index in the third quarter. Good stock selection in information technology and industrials contributed positively to performance. Poor stock selection and an underweight in health care and poor stock selection and an overweight in communication services detracted from performance.

The biggest contributors to performance during the quarter were Aspen Technology and Manhattan Associates. In the most recent quarter, Aspen Technology reported strong revenue growth, margin improvement, and positive new business opportunities. Manhattan Associates reported a quarter of robust sales, bookings, and profit growth, and management provided reasons why they believe demand for the company's solutions should remain resilient during softer macroeconomic times based on the need for high warehouse service levels. Other top contributors included EMCOR, Toro, and RBC Bearings.

The biggest detractors from performance during the quarter were Simpson Manufacturing and Rightmove. The shares of Simpson Manufacturing lagged despite the company's reports of solid operating results due to investor concerns over slowing residential construction activity and significant steel price inflation. Rightmove reported a quarter of growth in average revenue per advertisers. However, continued investor concerns around a slowdown in the United Kingdom property market and how that may affect the business going forward caused the shares to underperform. Other bottom contributors included Artisan Partners Asset Management, FTI Consulting, and Moelis.

Purchases and Sales

During the quarter, there were no new purchases or complete sales from the portfolio.

Outlook

We believe the plethora of bad news has led the stock market to a price level that already discounts a shallow-to-mild recession. However, simply put, equities will not bottom out until long-term bond yields (10 to 30 year) stop increasing. It was not a coincidence that stocks rallied from the middle of June until the middle of August when long-term yields were declining. We need a sustained decline in reported inflation statistics for this to happen. This seems likely at some point over the next six-to-twelve months. Monetary policy is working—raw material prices are falling (including oil); housing and autos are being hit hard (including used car prices and even new recently); semiconductors have turned from a shortage to a surplus in many areas; and many companies are starting to shed workers. Supply chain difficulties, which the Fed cannot directly control, are improving as well, but the Russian war and China's zero-COVID policy continue to create some supply difficulties. Given pessimistic investor sentiment, bearish positioning, and many attractively valued companies on a long-term basis, any better-than-feared news on the course of future interest rate increases could cause the markets to substantially improve from here. Historically, periods of stock market pessimism with zero speculation in them have been good long-term entry points for patient investors.

*There was a material difference in the Total Debt/EBITDA quality indicator for the Russell 2000® Index as of September 30, 2022 over the prior quarter end of June 30, 2022. This is primarily due to a single issuer in the index reporting income at essentially zero, causing the ratio to increase significantly.

†Free cash flow data is as of June 30, 2022. Prices are as of September 30, 2022. Excludes financials.

‡April 1, 1992. Standard deviation for the KAR strategy is based on net-of-fee returns. This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

IMPORTANT RISK CONSIDERATIONS: Equity Securities: The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small or medium-sized companies may enhance that risk. **Limited Number of Investments:** Because the portfolio has a limited number of securities, it may be more susceptible to factors adversely affecting its securities than a portfolio with a greater number of securities. **Market Volatility:** Local, regional, or global events such as war, acts of terrorism, the speed of infectious illness or other public health issues, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio manager(s) to invest the portfolio's assets as intended.

*April 1, 1992

[†]All periods less than one year are total returns and are not annualized. Returns are preliminary.

Returns could be reduced, or losses incurred, due to currency fluctuations.

[‡]Net of all fees and expenses. Assumes a 3% annual fee.

[‡]Performance calculations are for the nine months ended December 31, 1992.

Peer Comparison Chart

Ten Years Ending September 30, 2022

The eVestment Small Cap Core Universe includes 105 managers categorized in the small cap core asset class by eVestment. KAR does not pay any fees to be included in the eVestment Small Cap Core Universe or for the ranking itself. KAR does pay fees for the use of certain products and services provided by eVestment. eVestment rankings are based on gross of fee returns. Gross of fee returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Management fees are described in KAR's Form ADV Part 2A, which is available upon request and can also be found at <https://kayne.com/wp-content/uploads/ADV-Part-2A.pdf>. Returns could be reduced or losses incurred due to currency fluctuations. **Past performance is no guarantee of future results.**

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2020.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Small Cap Core Wrap Composite has had a performance examination for the period from January 1, 1999 through December 31, 2020. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary Small Cap Core Wrap Portfolios. Small Cap Core Wrap Portfolios are invested in equity securities with market capitalizations consistent with the Russell 2000® Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Index. The Russell 2000® Index is a market capitalization-weighted index of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is April 1992. The composite was created in October 1995. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

Beginning on January 1, 2006, sub-advisory wrap fee portfolios are also included in composite results. Each sub-advisory relationship is included in the composite as one account. All portfolios included in this composite for all periods are wrap portfolios.

The standard wrap fee schedule in effect is 3.00% on total assets. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional

information may be found in Part IIA of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Performance results include the reinvestment of all income. Pure gross returns do not reflect the deduction of any expenses, including trading costs. Prior to December 31, 2005, net annual returns are calculated by deducting 1/4th of an assumed maximum annual wrap fee of 3% on a quarterly basis. Beginning January 1, 2006, net annual returns are calculated using actual fees incurred. If no fee data is provided by wrap sponsors, the maximum annual wrap fee of 3% is used to calculate net of fee performance. Beginning January 1, 2016, net annual returns are calculated by deducting 1/12th of an assumed maximum annual wrap fee of 3% on a monthly basis. Wrap fees include all charges for trading costs, portfolio management, custody and other administrative expenses.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using pure gross returns) and the benchmark for the 36-month period, is presented starting 2012 because prior to January 1, 2010, the composite return was calculated quarterly and 36 monthly returns are not available.

GLOSSARY

Alpha: A risk-adjusted measure of an investment's excess return relative to a benchmark. Beta: A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. R2: A measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index. Sharpe Ratio: A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk.

INDEX DEFINITION

The Russell 2000® Index is a market capitalization-weighted index of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total return basis with dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
