

Virtus Stone Harbor Emerging Markets Bond Fund

A: VSHAX (92828Y615) | I: SHCDX (92828Y599)

MARKET REVIEW

Sector Review “Broad Market”

Emerging markets (EM) debt rebounded in Q4 as stabilizing inflation and the prospect of an easing in U.S. monetary policy turbocharged performance. Lower bond yields in developed countries, tempered inflation expectations, and a weaker U.S. dollar drove the improvement in performance. In December, the Federal Reserve (Fed) maintained its policy rate, recognizing that long-term inflation expectations had anchored helped by tighter monetary policy, while employment remained robust. The Fed’s decision signaled potential rate cuts in 2024. A widespread rally ensued across EM external debt (sovereign and corporate), EM currencies and domestic bond markets. A key factor underpinning the more optimistic outlook for these markets was the leading role of EMs in disinflation.

For more on our quarterly market review and outlook, [click here](#).

Benchmark Performance

EM corporate bonds returned 5.5%, consisting of equal total returns from the investment grade (IG) and high yield (HY) market segments. The benchmark spread tightened 20 basis points.

In IG bonds, the tightening in U.S. Treasury (UST) yields drove performance, while spread compression was the primary driver of returns in HY. At the industry level, the oil and gas sectors continued outperforming despite lower oil prices. Independent operators in Ghana and Colombia, in particular, benefitted from liability management exercises completed during Q4. At the country level, key outperformers included Argentina, Mexico, and South Africa. The presidential election outcome in Argentina drove strong performance in corporates on the prospect of political and fiscal reform. Zambia was the only country in the index with a negative return for the quarter, as Panama’s government closed First Quantum’s copper mine in Panama in reaction to social protests.

FUND PERFORMANCE REVIEW

The Fund (Class I) returned 5.76% (net of fees) and 6.03% (gross of fees) in the fourth quarter versus the J.P. Morgan CEMBI Broad Diversified Index return of 5.52%.

OUTLOOK & STRATEGY

Our base case (35% probability) assumes that inflation continues falling globally, growth slows, and the Fed keeps rates flat through early 2024 and starts cutting rates in the summer. If we are wrong, we believe the two most likely scenarios will lead the Fed to cut policy rates more aggressively, either to contain an economic downturn (25% probability), or to keep up with falling inflation while growth in the U.S. converges toward trend (30% probability). These point to lower U.S. policy rates by mid-year. Another scenario leads the Fed to hike policy rates as inflation turns back higher. We only assign a 10% probability to this outcome.

Yield and carry continue to support strong, positive projected returns on external sovereign and corporate debt, in our view. The yield on the JP Morgan EMBI Global Diversified has declined to 7.9% from 8.6% a year ago, while the high yield portion of the benchmark yields 11% compared to 12.26% a year ago. However, yields on both of these market segments remain 250 basis points above their average yields over the past decade. Similarly, yields of U.S. dollar-denominated corporate bonds from emerging markets are 140 bps above the ten-year average yield. To generate negative returns on sovereign or corporate debt over the next year would require significant combined shifts higher in U.S. Treasury yields and spreads, outcomes we believe have low probabilities in the current environment.

*Relative to JPMorgan CEMBI Broad Diversified Index.

**Credit ratings issued by Nationally Recognized Statistical Rating Organizations assess the credit worthiness of the issuers of the underlying securities and not to the Fund or its shares. Ratings are measured using a scale that ranges from AAA (highest) to NR (not rated). Not rated securities do not necessarily indicate low quality. The security's credit rating does not eliminate risk and credit ratings are subject to change. Credit Quality reflects a weighted average composite of the ratings of Standard & Poor's Corporation, Fitch, Moody's Investors Service, Inc and DBRS. Ratings are then adjusted to the Standard & Poor's rating tiers shown. In the case where the composite is in between two ratings the rating will be rounded down. A composite will not be generated if the bond is only rated by one of the four rating agencies. Expected ratings and unsolicited ratings, designated by 'e' and 'u', are not included in calculating the composite.

Performance data quoted represents past performance. Past performance does not guarantee future results. Investment return and principal value will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Please visit virtus.com for performance data current to the most recent month end. This share class has no sales charges and is not available to all investors. Other share classes have sales charges. See virtus.com for details.

The fund class gross expense ratio is 2.21%. The net expense ratio is 1.00%, which reflects a contractual expense reimbursement in effect through 9/30/2024.

Average annual total return is the annual compound return for the indicated period and reflects the change in share price and the reinvestment of all dividends and capital gains. Returns for periods of one year or less are cumulative returns.

Index: The **J.P. Morgan CEMBI Broad Diversified Index** tracks total returns for U.S. dollar denominated debt instruments issued by corporate entities in emerging markets countries. The benchmark limits the current face amount allocations of the bonds in the CEMBI Broad by constraining the total face amount outstanding for countries with larger debt stocks. Qualifying corporate bonds have a face amount greater than USD 300 million, maturity greater than 5 years, verifiable prices and cash flows, and from countries within Asia ex Japan, Latin America, Eastern Europe, Middle East, and Africa. The index is calculated on a total return basis. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.

Notes on Risk: Emerging Markets Investing: Emerging markets securities may be more volatile, or more greatly affected by negative conditions, than those of their counterparts in more established foreign markets. **Foreign Investing:** Investing in foreign securities subjects the portfolio to additional risks such as increased volatility; currency fluctuations; less liquidity; less publicly available information about the foreign investment; and political, regulatory, economic, and market risk. **Credit & Interest:** Debt instruments are subject to various risks, including credit and interest rate risk. The issuer of a debt security may fail to make interest and/or principal payments. Values of debt instruments may rise or fall in response to changes in interest rates, and this risk may be enhanced with longer-term maturities. **Counterparties:** There is risk that a party upon whom the portfolio relies to complete a transaction will default. **Currency Rate:** Fluctuations in the exchange rates between the U.S. dollar and foreign currencies may negatively affect the value of the portfolio's shares. **Derivatives:** Derivatives may include, among other things, futures, options, forwards and swap agreements and may be used in order to hedge portfolio risks, create leverage, or attempt to increase returns. Investments in derivatives may result in increased volatility and the portfolio may incur a loss greater than its principal investment. **High Yield Fixed Income Securities:** There is a greater risk of issuer default, less liquidity, and increased price volatility related to high yield securities than investment grade securities. **Liquidity:** Certain instruments may be difficult or impossible to sell at a time and price beneficial to the portfolio. **Income:** Income received from the portfolio may vary widely over the short- and long-term and/or be less than anticipated if the proceeds from maturing securities in the portfolio are reinvested in lower-yielding securities. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Local, regional, or global events such as war or military conflict, terrorism, pandemic, or recession could impact the portfolio, including hampering the ability of the portfolio's manager(s) to invest its assets as intended. **Prospectus:** For additional information on risks, please see the fund's prospectus.

Please consider a Fund's investment objectives, risks, charges, and expenses carefully before investing.
