

Small Cap Sustainable Growth Portfolio

First Quarter 2023 | Managed Accounts

Portfolio Review

The Small Cap Sustainable Growth portfolio outperformed the Russell 2000 Growth Index in the first quarter. Good stock selection and an overweight in consumer discretionary and good stock selection and an underweight in health contributed positively to performance. Poor stock selection in information technology and poor stock selection and an underweight in consumer staples detracted from performance.

The biggest contributors to performance during the quarter were Fox Factory and Duck Creek Technologies.

- Fox Factory continued to experience growth across its Powered Vehicle Group business, while the Specialty Sports business is experiencing a “normalization” in demand post the COVID pandemic boom.
- Duck Creek Technologies agreed to be acquired by a private equity firm for a premium to its pre-existing market value, causing shares to perform strongly during the quarter.
- Other top contributors included MarketAxess, AAON, and Auto Trader Group.

The biggest detractors from performance during the quarter were ServisFirst Bancshares and BILL.

- The shares of ServisFirst Bancshares, like other regional banks, came under pressure late in the quarter as investors became concerned about deposit outflows after the failure of Silicon Valley Bank and Signature Bank.
- BILL reported a quarter of strong organic sales and profit growth, however, total payment value (TPV) flowing through the company’s payment solutions’ growth slowed due to client budgetary tightening for its small and medium-sized clients. Due to the TPV deceleration, the shares underperformed.
- Other bottom contributors included Ryan Specialty, Morningstar, and Oportun Financial.

Purchases and Sales

During the quarter, there were no new purchases. We sold Autohome, a Chinese company, due to the exogenous risk of a conflict between China and Taiwan. While we have no special ability to predict the likelihood or timing of such an event, we prefer to avoid, when possible, placing our investment dollars in geographies where there are sufficient high-level risks that would overwhelm the merits of a specific business.

Outlook

Perceived safe havens and quality stocks performed well in the first quarter as investors have continued to grapple with high uncertainty in the market outlook. We came into 2023 with clear consensus among investors that the year would bring at least a mild recession. January data was stronger than expected and the market quickly priced in a “no landing” scenario. February data was somewhat weaker, and the market started to price in a “soft landing” outcome. Then a regional bank crisis emerged, and the market started to price in a “hard landing” scenario. Fortunately, banking fears started to dissipate the last two weeks of the quarter. Multiple cross currents in interest rates, inflation, economic growth, and investor sentiment have made for a difficult forecasting environment for investors. While the short-term outlook is somewhat murky, we believe that the long-term outlook should be attractive. Cash is piling up on the sidelines, investors are generally negative, speculation is absent from equities (IPOs, SPACs, and memes are dormant), and businesses are very cautious in hiring and expansion plans. Historically, these types of conditions have led to meaningful long-term investing outcomes, although it will remain to be seen how markets will respond for the remainder of 2023.

*KAR utilizes the interquartile method when calculating TD/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers—only the extreme ends are excluded—and that it can be applied consistently as a quantitative method for most fundamental characteristics.

[†]Free cash flow data is as of December 31, 2022. Prices are as of March 31, 2023. Excludes financials.

[‡]January 1, 1998. Standard deviation for the KAR strategy is based on net-of-fee returns.

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

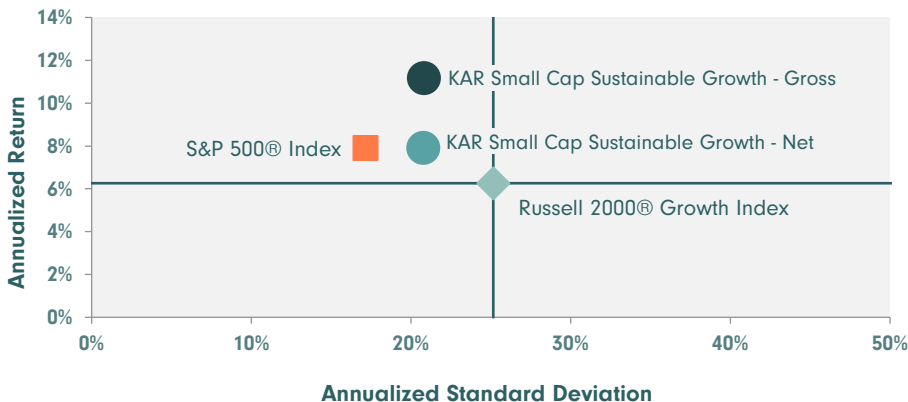

Holdings are subject to change. Holdings and weightings are based on a representative portfolio. Individual Investors' holdings may differ slightly. The sector information represented above is based on GICS sector classifications. Data is obtained by FactSet Research Systems and is assumed to be reliable.

IMPORTANT RISK CONSIDERATIONS: Equity Securities: The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small or medium-sized companies may enhance that risk. **Foreign Investing:** Investing in foreign securities subjects the portfolio to additional risks such as increased volatility, currency fluctuations, less liquidity, and political, regulatory, economic, and market risk. **Limited Number of Investments:** Because the portfolio has a limited number of securities, it may be more susceptible to factors adversely affecting its securities than a portfolio with a greater number of securities. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Price changes may be short- or long-term. Local, regional, or global events such as war or military conflict (e.g., Russia's invasion of Ukraine), acts of terrorism, the spread of infectious illness (e.g., COVID-19 pandemic) or other public health issues, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio's manager(s) to invest the portfolio's assets as intended.

Peer Comparison Chart

Ten Years Ending March 31, 2023

The eVestment Small Cap Growth Universe includes 133 managers categorized in the small cap growth asset class by eVestment. KAR does not pay any fees to be included in the eVestment Small Cap Growth Universe or for the ranking itself. KAR does pay fees for the use of certain products and services provided by eVestment. eVestment rankings are based on gross of fee returns. Gross of fee returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Management fees are described in KAR's Form ADV Part 2A, which is available upon request and can also be found at <https://kayne.com/wp-content/uploads/ADV-Part-2A.pdf>. Returns could be reduced or losses incurred due to currency fluctuations. **Past performance is no guarantee of future results.**

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2021.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Small Cap Sustainable Growth Wrap Composite has had a performance examination for the period from January 1, 1999 through December 31, 2021. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety

of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary Small Cap Sustainable Growth Wrap Portfolios. Small Cap Sustainable Growth Wrap Portfolios are invested in equity securities with market capitalizations in line with the Russell 2000® Growth Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Growth Index. The Russell 2000® Growth Index is a market capitalization-weighted index of growth-oriented stocks of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is January 1998. The composite was created in July 2003. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

Beginning on January 1, 2006, sub-advisory wrap fee portfolios are also included in composite results. Each sub-advisory relationship is included in the

composite as one account. All portfolios included in this composite for all periods are wrap portfolios.

The standard wrap fee schedule in effect is 3.00% on total assets. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Performance results include the reinvestment of all income. Pure gross returns do not reflect the deduction of any expenses, including trading costs. Net annual returns are calculated by deducting 1/12th of an assumed maximum annual wrap fee of 3% on a monthly basis. Wrap fees include all charges for trading costs, portfolio management, custody and other administrative expenses.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using pure gross returns) and the benchmark for the 36-month period.

GLOSSARY

Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk. **Alpha:** A risk-adjusted measure of an investment's excess return relative to a benchmark. **Sharpe Ratio:** A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Information Ratio:** The information ratio (IR) is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Beta:** A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. **Downside Capture Ratio:** A statistical measure of an investment manager's overall performance in down-markets. It is used to evaluate how well an investment manager performed relative to an index during periods when that index has dropped.

Tracking Error: The divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. It is reported as a standard deviation percentage difference, which reports the difference between the return an investor receives and that of the benchmark they were attempting to imitate.

INDEX DEFINITION

The Russell 2000® Growth Index is a market capitalization-weighted index of growth-oriented stocks of the smallest 2,000 companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total return basis with dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
