INVESTMENT OPPORTUNITY

Biotechnology investors gain exposure to one of the most exciting, high-growth sectors in the global economy today. These companies are in the business of designing drugs that save lives. Everything ranging from antivirals, antibiotics and cancer-fighting medicines to gene therapies, cell-based therapies and enzyme replacement therapies are developed in the biotech sector.

BBP passively invests in products stage biotechnology companies. Products stage companies are typically more established companies with much clinical trial failure risk behind them. They have already successfully completed multiple human clinical trials and have received FSA approval to sell and market a drug. They devote more of their energies toward educating patients, physicians and insurance providers in order to drive sales and profit growth.

In accordance with its index, BBP weights its constituents equally and rebalances semi-annually.

Fund Risks

Exchange Traded Fund: The value of an ETF may be more volatile than the underlying portfolio of securities the ETF is designed to track. The costs of owning the ETF may exceed the cost of investing directly in the underlying securities.

Industry/Sector Concentration: A fund that focuses its investments on a particular industry or sector will be more sensitive to conditions that affect industry or sector than a non-concentrated fund.

Market Price/NAV: At the time of purchase and/or sale, an investor's shares may have a market price that is above or below the fund's NAV, which may increase the investor's risk of loss.

Correlation to Index: The performance of the fund and its index may vary somewhat due to factors such as fund flows, transaction costs, and timing differences associated with addition to and deletions from its index.

Non-Diversified: The fund is non-diversified and may be more susceptible to factors negatively impacting its holdings to the extent that each security represents a larger portion of the fund's assets.
