

## Mid Cap Core Portfolio

Fourth Quarter 2022 | Managed Accounts

### Portfolio Review

The Mid Cap Core portfolio outperformed the Russell Midcap Index in the fourth quarter. Good stock selection and an overweight in health care and good stock selection in consumer discretionary contributed positively to performance. Poor stock selection in financials and information technology detracted from performance.

The biggest contributors to performance during the quarter were AMETEK and Azenta. AMETEK's shares were strong in the quarter after reporting financial results that showed the company's ability to pass-through pricing in this difficult inflationary environment. After weakness earlier in the year, the stock has been strong as investor confidence returns due to solid execution on supply chain issues as well as ongoing consistent demand from its end markets. In the most recent quarter, Azenta's shares performed well after its core business reported strong results. The company saw strong demand and backlog for its automated cold stores and storage services. Other top contributors included Ross Stores, Globus Medical, and Cooper Companies.

The biggest detractors from the portfolio during the quarter were Aspen Technology and First Financial Bankshares. Aspen Technology's merger with another software business closed in May 2022, which made the comparability of reported financials this quarter relative to previous quarters challenging. The main takeaways from the current quarter were that despite the uncertain macro environment, demand from clients remains strong and the merger business has already helped Aspen source deals in new industry verticals. Management reiterated their guidance for the current fiscal year and touted the company's increased scale and access to new geographies and verticals. Despite these positives, the share price came under pressure in December as markets became more challenging and concerns rose about a highly anticipated recession in 2023. In the most recent quarter, First Financial reported strong loan growth and credit metrics. However, the share price came under pressure due to an expensive valuation and a contraction in book value driven by market-to-market adjustments in the bank's fixed income portfolio. Other bottom contributors included Monolithic Power, Broadridge Financial Solutions, and West Pharmaceutical Services.

### Purchases and Sales

During the quarter, we purchased Monolithic Power. There were no complete sales from the portfolio. Monolithic Power is a fabless analog and mixed signal semiconductor company that designs, develops, and markets high-performance power electronics solutions for the computing and storage, automotive, industrial, communications, and consumer end markets. The company primarily offers DC-to-DC semiconductors used for the conversion and control of voltages, which is essential across all electronic systems.

### Outlook

The Federal Reserve's hawkish monetary policy combined with improving supply chain issues appear to be working in reducing the core inflation rate. Inflation concerns, however, have been replaced by impending recession fears in the market. We certainly have witnessed a growth slowdown over the last year, and we are likely to see a continued growth slowdown over the next six-to-twelve months. The stock market seems to be already pricing in a moderate recession for 2023. This has to be the most anticipated recession in the history of corporate America. This does not mean that a recession cannot occur, but it does suggest a hard landing is less probable. Recession fears will not disappear overnight so investors should expect continued volatility in 2023 and will need to be patient. Additionally, the top-heavy S&P 500 companies, MAMAA (Meta, Apple, Microsoft, Amazon, and Alphabet) in particular, are having significant fundamental growth issues which has not been the case since 2008. In our view, this may bode well for many small- and medium-sized companies, which can continue to grow in a lackluster economic environment.

Annualized Standard Deviation—Since Inception <sup>‡</sup>	15.9%	19.7%

\*KAR utilizes the interquartile method when calculating TD/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers--only the extreme ends are excluded--and that it can be applied consistently as a quantitative method for most fundamental characteristics.

<sup>†</sup>Free cash flow data is as of September 30, 2022. Prices are as of December 31, 2022. Excludes financials.

<sup>‡</sup>January 1, 2000. Standard deviation for the KAR strategy is based on net-of-fee returns.

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

The eVestment Mid Cap Core Universe includes 41 managers categorized in the mid cap core asset class by eVestment. KAR does not pay any fees to be included in the eVestment Mid Cap Core Universe or for the ranking itself. KAR does pay fees for the use of certain products and services provided by eVestment. eVestment rankings are based on gross of fee returns. Gross of fee returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Management fees are described in KAR's Form ADV Part 2A, which is available upon request and can also be found at <https://kayne.com/wp-content/uploads/ADV-Part-2A.pdf>. Returns could be reduced or losses incurred due to currency fluctuations. **Past performance is no guarantee of future results.**

**IMPORTANT RISK CONSIDERATIONS: Equity Securities:** The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small or medium-sized companies may enhance that risk. **Limited Number of Investments:** Because the portfolio has a limited number of securities, it may be more susceptible to factors adversely affecting its securities than a portfolio with a greater number of securities. **Market Volatility:** Local, regional, or global events such as war, acts of terrorism, the speed of infectious illness or other public health issues, recessions, or other events could have a significant impact on the portfolio and its investments, including hampering the ability of the portfolio manager(s) to invest the portfolio's assets as intended.

\*January 1, 2000

<sup>†</sup>All periods less than one year are total returns and are not annualized. Returns are preliminary.

<sup>‡</sup>Net of all fees and expenses. Assumes a 3% annual fee.

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Returns of the Kayne Anderson Rudnick composite are preliminary unless otherwise specified. For further details on the composite, please see the disclosure statement in this presentation. Data is obtained from FactSet Research Systems and is assumed to be reliable. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2021.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Mid Cap Core Wrap Composite has had a performance examination for the period from January 1, 2000 through December 31, 2021. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940.

Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all discretionary Mid Cap Core Wrap Portfolios. Mid Cap Core Wrap Portfolios are invested in equity securities with market capitalizations consistent with the Russell Midcap® Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell Midcap® Index. The Russell Midcap® Index is a market capitalization-weighted index of the 800 smallest companies in the Russell 1000® Index, which comprises the 1,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is January 2000. The composite was created in July 2003. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

Beginning on January 1, 2006, sub-advisory wrap fee portfolios are also included in composite results. Each sub-advisory relationship is included in the composite

as one account. All portfolios included in this composite for all periods are wrap portfolios.

The standard wrap fee schedule in effect is 3.00% on total assets. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Performance results include the reinvestment of all income. Pure gross returns do not reflect the deduction of any expenses, including trading costs. Net annual returns are calculated by deducting 1/12th of an assumed maximum annual wrap fee of 3% on a monthly basis. Wrap fees include all charges for trading costs, portfolio management, custody and other administrative expenses.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using pure gross returns) and the benchmark for the 36-month period.

#### GLOSSARY

Alpha: A risk-adjusted measure of an investment's excess return relative to a benchmark. Beta: A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. R2: A measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index. Sharpe Ratio: A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk.

#### INDEX DEFINITION

The Russell Midcap® Index is a market capitalization-weighted index of medium-capitalization stocks of U.S. companies. The index is calculated on a total return basis with dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
