

Mid Cap Core Portfolio

Fourth Quarter 2023 | Managed Accounts

Portfolio Review

The Mid Cap Core portfolio underperformed the Russell Midcap Index in the fourth quarter. Poor stock selection in financials and information technology detracted from performance. An underweight in energy and good stock selection in consumer staples contributed positively to performance.

The biggest contributors to performance during the quarter were Monolithic Power Systems and Azenta. Monolithic Power Systems' shares outperformed in the quarter as the company saw strong sequential growth in its enterprise data business given its high share of power management attached to robust sales of NVIDIA's H100 graphic processing units, which have been in high demand due to heavy investments in artificial intelligence. While other markets such as industrial, communications, and consumer were notably weaker, we believe the strength in other end markets has provided attractive counter-balancing revenue streams in a volatile semiconductor environment. Azenta reported quarterly results that built on last quarter's successes, with better-than-expected growth from a newly acquired company, as well as more normalized patterns in its life sciences instruments business. Its large, automated stores continue to enjoy strong demand, but the overall biotech environment appears to be normalizing, which we believe should support earnings growth going forward. Other top contributors included Ross Stores, Equifax, and Cooper Companies.

The biggest detractors to performance during the quarter were West Pharmaceutical Services and Zebra Technologies. West Pharmaceutical Services reported solid third quarter revenue, one of the last quarters where year-over-year comparisons are weaker thanks to unusually high COVID demand. That said, investors may have been hoping for even stronger topline growth given West's exposure to GLP-1 drug delivery devices. The premium market continues to be strong, whereas some of the less advanced drug delivery mechanisms are soft post-COVID. We do not believe there are any competitive changes. Zebra Technologies' shares underperformed despite a broader recovery in technology stocks as market participants grapple with demand uncertainty after several years of large buildouts in retail, e-commerce, and logistics. While distributor destocking has been moderating, demand recovery ultimately hinges on an improving goods economy which has been subdued as consumers allocate more spending towards services. Other bottom contributors included LPL Financial, Equity LifeStyle Properties, and Old Dominion Freight Line.

Purchases and Sales

During the quarter, we purchased FactSet Research Systems and Wabtec. We sold Equity LifeStyle Properties and Zebra Technologies. FactSet Research Systems is a global provider of integrated financial information, analytical applications, and services for the investment and corporate communities. Wabtec is a worldwide leader in rail technology. It manufactures, modernizes, and services locomotives, equipment, and digital solutions to the freight and transportation rail industries globally. The elevated interest rate environment has muted Equity LifeStyle Properties' story, so we sold our position to fund the purchase of FactSet Research Systems. While we admire Zebra Technologies' long-term opportunities and business model, we sold our position to fund the purchase in Wabtec that we believe offers incrementally larger growth opportunities with a comparable valuation.

Outlook

With the Federal Reserve hiking cycle behind us and corporate earnings growth likely to resume, we believe 2024 should be a favorable year for equity returns. Coming into 2024, investor sentiment is nowhere near as negative as it was coming into 2023 but there is still plenty of cash on the sidelines built up over the last year. As short-term interest rates decline and the yield curve moves to flat, or even positively sloped, we believe this capital will make its way into fixed income and equity markets. From our perspective, returns in 2024 are unlikely to be as robust as 2023 but are likely to generate returns in line with earnings growth. We expect that 2024 will experience more volatility due to the election, which is likely to be contentious.

*KAR utilizes the interquartile method when calculating Debt/EBITDA. The interquartile method excludes outliers from an aggregate statistic such as weighted average. The interquartile method does not assume that data from the top or bottom of the distribution are outliers—only the extreme ends are excluded—and that it can be applied consistently as a quantitative method for most fundamental characteristics. Debt/EBITDA utilizes net debt for the calculation.

†Free cash flow data is as of September 30, 2023. Prices are as of December 31, 2023. Excludes financials.

‡January 1, 2000. Standard deviation for the KAR strategy is based on net-of-fee returns.

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation. Data is obtained from FactSet Research Systems and BNY Mellon and is assumed to be reliable. Other principal consultant firms may use different algorithms to calculate selected statistics. Estimates are based on certain assumptions and historical information. **Past performance is no guarantee of future results.** Returns could be reduced, or losses incurred, due to currency fluctuations.

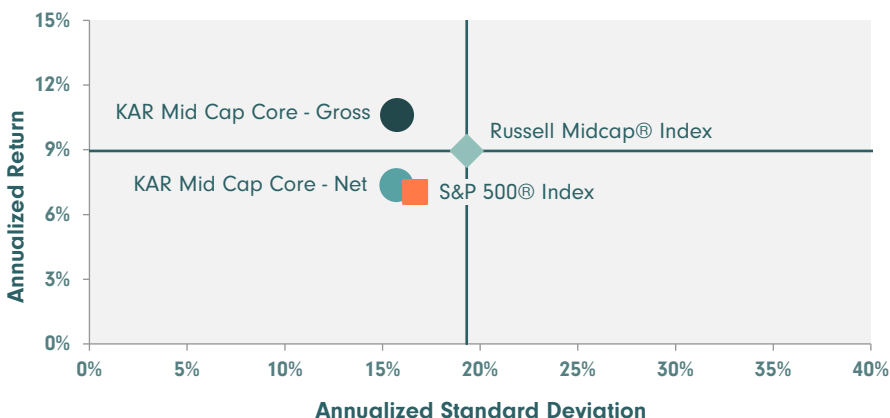

Holdings are subject to change. Holdings and weightings are based on a representative portfolio. Individual Investors' holdings may differ slightly. The sector information represented above is based on GICS sector classifications. Data is obtained by FactSet Research Systems and is assumed to be reliable.

IMPORTANT RISK CONSIDERATIONS: Equity Securities: The market price of equity securities may be adversely affected by financial market, industry, or issuer-specific events. Focus on a particular style or on small, medium, or large-sized companies may enhance that risk. **Industrial Concentration:** Because the portfolio is presently heavily weighted in the industrial sector, it will be impacted by that sector's performance more than a portfolio with broader sector diversification. **Limited Number of Investments:** Because the portfolio has a limited number of securities, it may be more susceptible to factors adversely affecting its securities than a portfolio with a greater number of securities. **Market Volatility:** The value of the securities in the portfolio may go up or down in response to the prospects of individual companies and/or general economic conditions. Local, regional, or global events such as war or military conflict, terrorism, pandemic, or recession could impact the portfolio, including hampering the ability of the portfolio's manager(s) to invest its assets as intended.

Peer Comparison Chart

Ten Years Ending December 31, 2023

● KAR Mid Cap Core ● Russell Midcap[®] Index

The eVestment Mid Cap Core Universe includes 43 managers categorized in the mid cap core asset class by eVestment. KAR does not pay any fees to be included in the eVestment Mid Cap Core Universe or for the ranking itself. KAR does pay fees for the use of certain products and services provided by eVestment. eVestment rankings are based on gross of fee returns. Gross of fee returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Management fees are described in KAR's Form ADV Part 2A, which is available upon request and can also be found at <https://kayne.com/wp-content/uploads/ADV-Part-2A.pdf>. Returns could be reduced or losses incurred due to currency fluctuations. **Past performance is no guarantee of future results.**

KAR (as defined below) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. KAR has been independently verified for the period from January 1, 1999 through December 31, 2022.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis.

The Mid Cap Core Wrap Composite has had a performance examination for the period from January 1, 2000 through December 31, 2022. The verification and performance examination reports are available upon request.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Kayne Anderson Rudnick Investment Management, LLC ("KAR"), a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940.

Registration of an Investment Advisor does not imply any level of skill or training. KAR manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all discretionary Mid Cap Core Wrap Portfolios. Mid Cap Core Wrap Portfolios are invested in equity securities with market capitalizations consistent with the Russell Midcap® Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell Midcap® Index. The Russell Midcap® Index is a market capitalization-weighted index of the 800 smallest companies in the Russell 1000® Index, which comprises the 1,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The inception date of the composite is January 2000. The composite was created in July 2003. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. The firm's list of composite descriptions, list of broad distribution pooled fund and the list of limited distribution pooled funds descriptions are available upon request.

Beginning on January 1, 2006, sub-advisory wrap fee portfolios are also included in composite results. Each sub-advisory relationship is included in the composite

as one account. All portfolios included in this composite for all periods are wrap portfolios.

The standard wrap fee schedule in effect is 3.00% on total assets. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Performance results include the reinvestment of all income. Pure gross returns do not reflect the deduction of any expenses, including trading costs. Net annual returns are calculated by deducting 1/12th of an assumed maximum annual wrap fee of 3% on a monthly basis. Wrap fees include all charges for trading costs, portfolio management, custody and other administrative expenses.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using pure gross returns) and the benchmark for the 36-month period.

GLOSSARY

Standard Deviation: Measures variability of returns around the average return for an investment portfolio. Higher standard deviation suggests greater risk. **Alpha:** A risk-adjusted measure of an investment's excess return relative to a benchmark. **Sharpe Ratio:** A risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Information Ratio:** The information ratio (IR) is a measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. **Beta:** A quantitative measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole. **Downside Capture Ratio:** A statistical measure of an investment manager's overall performance in down-markets. It is used to evaluate how well an investment manager performed relative to an index during periods when that index has dropped.

Tracking Error: The divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. It is reported as a standard deviation percentage difference, which reports the difference between the return an investor receives and that of the benchmark they were attempting to imitate.

INDEX DEFINITION

The Russell Midcap® Index is a market capitalization-weighted index of medium-capitalization stocks of U.S. companies. The index is calculated on a total return basis with dividends reinvested. The index is unmanaged, its returns do not reflect any fees, expenses, or sales charges, and is not available for direct investment.
