

VIRTUS VARIABLE INSURANCE TRUST PROSPECTUS

Virtus Duff & Phelps International Series

The Prospectus describes the Virtus Duff & Phelps International Series (the "Series"), which is available as an underlying investment through a variable life insurance policy or a variable annuity contract (a "variable contract"). For information about your variable contract, including information about insurance-related expenses, see the prospectus for your variable contract.

The Securities and Exchange Commission has not approved or disapproved of these securities or determined if this prospectus is truthful or complete. Any representation to the contrary is a criminal offense. Please carefully consider the investment objectives, risks, charges and expenses of the Series before investing. For this and other information about any Virtus Variable Insurance Trust series, call 800-367-5877 or visit virtus.com for a prospectus. Read it carefully before you invest.

Virtus Duff & Phelps International Series

Fund Summary

Investment Objective

The Series has an investment objective of high total return consistent with reasonable risk.

Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Virtus Duff & Phelps International Series. The table does not include any fees or sales charges imposed under the variable contracts for which the Series is an investment option. If they were included, your costs would be higher.

Shareholder Fees (<i>fees paid directly from your investment</i>)	Class A	Class I
Shareholder Fees	None	None

Annual Series Operating Expenses (<i>expenses that you pay each year as a percentage of the value of your investment</i>)	Class A	Class I
Management Fees	0.75%	0.75%
Distribution and/or Service (12b-1) Fees	0.25%	None
Other Expenses	0.25%	0.25%
Acquired Fund Fees and Expenses	0.01%	0.01%
Total Annual Series Operating Expenses ^(a)	1.26%	1.01%
Less: Expense Reimbursement ^(b)	(0.07)%	(0.07)%
Total Annual Series Operating Expenses After Expense Reimbursement ^{(a)(b)}	1.19%	0.94%

(a) The Total Annual Series Operating Expenses do not correlate to the ratio of expenses to average net assets appearing in the Financial Highlights tables, which tables reflect only the operating expenses of the Series and do not include proxy expenses or acquired fund fees and expenses.

(b) The Series' investment adviser has contractually agreed to limit the Series' total annual operating expenses (excluding certain expenses, such as front-end or contingent deferred sales charges, taxes, interest, brokerage commissions, unusual or infrequently occurring expenses (such as litigation) and acquired fund fees and expenses, if any) so that such expenses do not exceed 1.18% for Class A Shares and 0.93% for Class I Shares through April 30, 2018. Following the contractual period, the adviser may discontinue this expense reimbursement arrangement at any time. Under certain conditions, the adviser may recapture operating expenses reimbursed under this arrangement for a period of three years following the time such reimbursement occurred.

Example

This example is intended to help you compare the cost of investing in the Series with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the Series for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year, that the Series' total operating expenses remain the same and that the expense reimbursement arrangement remains in place for the contractual period. The example does not reflect variable contract fees and charges, and if it did, the costs shown would be higher. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class A	\$121	\$393	\$685	\$1,516
Class I	\$96	\$315	\$551	\$1,230

Portfolio Turnover

The Series pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Series Operating Expenses or in the Example, affect the Series' performance. During the most recent fiscal year, the Series' portfolio turnover rate was 83% of the average value of its portfolio.

Principal Investment Strategies

Under normal circumstances, the Series invests at least 80% of its assets in equity securities of issuers located outside of the United States. Equity securities in which the fund invests include common stocks, preferred stocks and ADRs.

The Series invests primarily in developed countries, but may also invest in issuers located in emerging market countries. The subadviser seeks to diversify its portfolio from a variety of sectors and countries, and typically invests in the securities of medium to large capitalization companies, but is not limited to investing in the securities of companies of any particular size. The Series may use derivatives to hedge against foreign currency exchange rates. The Series seeks to provide investors with access to high-quality international businesses selling at attractive valuations. Ideally these companies are not only growing their earnings but are also creating economic value by maintaining or growing their return on invested capital. The subadviser's process is driven by bottom-up fundamental research and informed by top-down macro views. In evaluating securities for inclusion in the Series, the subadviser applies a cash flow based approach to valuation, as well as additional fundamental research to assess the economic value added, financial strength, franchise quality, and management alignment of individual companies. Top-down macro research is utilized to assess the market environment, and to assist with regional, country, and sector allocations. As part of the macro process, the subadviser takes into account, among other things, monetary policy, political factors, economic growth, and valuation.

Principal Risks

The Series may not achieve its objective(s), and it is not intended to be a complete investment program. The value of the Series' investments that supports your share value may decrease. If between the time you purchase shares and the time you sell shares the value of the Series' investments decreases, you will lose money. Investment values can decrease for a number of reasons. Conditions affecting the overall economy, specific industries or companies in which the Series invests can be worse than expected, and investments may fail to perform as the subadviser expects. As a result, the value of your shares may decrease. Purchase and redemption activities by variable contract owners may impact the management of the Series and its ability to achieve its investment objective(s). The redemption by one or more large variable contract owners or groups of variable contract owners of their holdings in the Series could have an adverse impact on the remaining variable contract owners in the Series including by accelerating the realization of capital gains and increasing the Series' transaction costs. The principal risks of investing in the Series are:

- > **Depositary Receipts Risk.** The risk that investments in foreign companies through depositary receipts will expose the Series to the same risks as direct investments in securities of foreign issuers.
- > **Derivatives Risk.** The risk that the Series will incur a loss greater than the Series' investment in, or will experience greater share price volatility as a result of investing in, a derivative contract. Derivatives may include, among other things, futures, options, forwards and swap agreements and may be used in order to hedge portfolio risks, create leverage, or to attempt to increase returns.
- > **Emerging Market Investing Risk.** The risk that prices of emerging markets securities will be more volatile, or will be more greatly affected by negative conditions, than those of their counterparts in more established foreign markets.
- > **Equity Securities Risk.** The risk that events negatively affecting issuers, industries or financial markets in which the Series invests, will impact the value of the stocks held by the Series and thus, the value of the Series' shares over short or extended periods. Investments in a particular style or in small or medium-sized companies may enhance that risk.
- > **Foreign Investing Risk.** The risk that the prices of foreign securities in the Series' portfolio will be more volatile than those of domestic securities, or will be negatively affected by currency fluctuations, less regulated or liquid securities markets, or economic, political or other developments.
- > **Market Volatility Risk.** The risk that the value of the securities in which the Series invests may go up or down in response to the prospects of individual issuers and/or general economic conditions. Price changes may be temporary or may last for extended periods.
- > **Value Stocks Risk.** The risk that the Series will underperform when value investing is out of favor or that the Series' investments will not appreciate in value as anticipated.

Performance

The following bar chart and table provide some indication of the risks of investing in the Series. The bar chart shows changes in the Series' performance from year to year over a 10-year period. The table shows how the Series' average annual returns compare to those of a broad-based securities market index. The Series' past performance is not necessarily an indication of how the Series will perform in the future. The Series' returns in the chart and table do not reflect the deduction of any separate account or variable contract charges. The returns would have been less than those shown if such charges were deducted.

Calendar Year Annual Total Returns for Class A Shares

Best Quarter: 2Q/2009: 26.08% Worst Quarter: 4Q/2008: -21.56% Year to date (3/31/17): 3.56%

Average Annual Total Returns (for the periods ended 12/31/16)	1 Year	5 Years	10 Years	Since Inception Class I (4/30/13)
Class A	-1.61%	1.23%	1.22%	—
Class I	-1.28%	—	—	-3.94%
MSCI EAFE® Index (net) (does not reflect fees or expenses)	1.00%	6.53%	0.75%	1.53%

Class I Shares have been in existence only since April 30, 2013; therefore, limited performance information for Class I Shares is available to include here. However, the returns for Class I Shares for other periods would have been substantially similar to those shown for Class A Shares because Class I Shares and Class A Shares are invested in the same portfolio of securities. Class A Shares pay distribution and services (12b-1) fees and Class I Shares do not; therefore, had the Class I Shares been operational during the periods shown only for Class A Shares, investment performance for Class I Shares would have been higher than for Class A Shares.

Updated performance information is available at virtus.com or by calling 800-367-5877.

Management

The Adviser and Subadviser

Virtus Investment Advisers, Inc. (“VIA”) is the investment adviser to the Series.

Duff & Phelps Investment Management Co. (“Duff & Phelps”), an affiliate of VIA, is the subadviser to the Series (since September 2016).

Portfolio Management

- > **Frederick A. Brimberg**, Senior Managing Director and Senior Portfolio Manager at Duff & Phelps. Mr. Brimberg has served as a Portfolio Manager of the Series since 2012.

Purchase and Sale of Series Shares

The Series does not offer its shares to the general public. The Series currently offers shares only to the separate accounts of participating insurance companies. Virtus Variable Insurance Trust (the “Trust”), of which the Series is a separate investment portfolio, has entered into an agreement with the insurance company sponsor of each separate account (participation agreement) setting forth the terms and conditions pursuant to which the insurance company will purchase and redeem shares of the Series. For information concerning the purchase of units of the separate accounts, see the variable contract prospectus.

Tax Information

Since the separate accounts are the only shareholders of the Series, no discussion is included herein as to the federal income tax consequences at the shareholder level. For information concerning the federal income tax consequences to the purchasers of variable contracts, see the variable contract prospectus which describes the particular separate account and variable contract.

Payments to Insurance Companies and Other Financial Intermediaries

Series shares are generally available only through intermediaries, *i.e.*, the separate accounts. The Series (and/or its related companies) may pay the insurance companies (and/or their related companies) for distribution and/or other services; some of the payments may, in turn, go to broker-dealers and other financial intermediaries. For example, the Series may make payments for sub-transfer agency services to one or more of the insurance companies. Such payments may create a conflict of interest for an intermediary by influencing the intermediary's investment recommendations, or be a factor in the insurance company's decision to include the Series as an underlying investment option in a variable contract. Ask your salesperson or review your variable contract prospectus for more information.

More About Principal Investment Strategies

Under normal circumstances, the Series invests at least 80% of its assets in equity securities of issuers located outside of the United States. The Series invests primarily in developed countries, but may also invest in issuers located in emerging market countries. The subadviser seeks to diversify its portfolio from a variety of sectors and countries, and typically invests in the securities of medium to large capitalization companies, but is not limited to investing in the securities of companies of any particular size. The Series will primarily hold securities of companies listed on a foreign securities exchange or quoted on an established foreign over-the-counter market, or American Depositary Receipts (ADRs). In determining the “location” of an issuer, the subadviser primarily relies on the country where the issuer is incorporated. However, the country of risk is ultimately determined based on analysis of the following criteria: actual building address (domicile), primary exchange on which the security is traded and country in which the greatest percentage of company revenue is generated. This evaluation is conducted so as to determine that the issuer’s assets are exposed to the economic fortunes and risks of the designated country. The Series’ policy of investing 80% of its assets in foreign equity securities may be changed only upon 60 days’ written notice to shareholders.

The Series seeks to provide investors with access to high-quality international businesses selling at attractive valuations. Ideally these companies are not only growing their earnings but are also creating economic value by maintaining or growing their return on invested capital. The subadviser’s process is driven by bottom-up fundamental research and informed by top-down macro views, with an expectation that a significant proportion of any long-term performance will come from security selection. In evaluating securities for inclusion in the Series, the subadviser applies a cash flow based approach to valuation, as well as additional fundamental research to assess the economic value added, financial strength, franchise quality, and management alignment of individual companies. Top-down macro research is utilized to assess the market environment, and to assist with regional, country, and sector allocations. As part of the macro process, the subadviser takes into account, among other things; monetary policy, political factors, economic growth, and valuation. The subadviser believes this approach produces long-term investment returns characterized by low absolute volatility and downside protection.

In determining which portfolio securities to sell, the subadviser considers, among other things; whether a security has become fully valued, if there has been a material change in the assessment of the company’s fundamentals or original thesis, the stock is not acting as expected, there is a better alternative available, and/or a portfolio rebalancing.

Temporary Defensive Strategy: During periods of adverse market conditions, the Series may take temporary defensive positions that are inconsistent with its principal investment strategies by holding all or part of its assets in cash or short-term money market instruments including obligations of the U.S. Government, high-quality commercial paper, certificates of deposit, bankers acceptances, bank interest-bearing demand accounts, and repurchase agreements secured by U.S. Government securities. When this allocation happens, the Series may not achieve its objective.

Please see “More About Principal Risks” for information about the risks of investing in the Series.

More About Principal Risks

The Series’ investments are subject generally to market risk and the risk of selecting underperforming securities and asset classes, which may adversely affect the Series and lead to loss of principal.

Depositary Receipts

The Series may invest in American Depositary Receipts (ADRs) sponsored by U.S. banks, European Depositary Receipts (EDRs), Global Depositary Receipts (GDRs), ADRs not sponsored by U.S. banks, other types of depositary receipts (including non-voting depositary receipts) and other similar instruments representing securities of foreign companies.

Although certain depositary receipts may reduce or eliminate some of the risks associated with foreign investing, these types of securities generally are subject to many of the same risks as direct investments in securities of foreign issuers.

Derivatives

Derivative transactions are contracts whose value is derived from the value of an underlying asset, index or rate, including futures, options, non-deliverable forwards, forward foreign currency exchange contracts and swap agreements. The Series may use derivatives to hedge against factors that affect the value of its investments, such as

interest rates and foreign currency exchange rates. The Series may also utilize derivatives as part of its overall investment technique to gain or lessen exposure to various securities, markets, volatility, dividend payments and currencies.

Derivatives typically involve greater risks than traditional investments. It is generally more difficult to ascertain the risk of, and to properly value, derivative contracts. Many derivatives, and particularly those that are privately negotiated, are complex and often valued subjectively. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to the Series. The prices of derivatives may move in unexpected ways, especially in abnormal market conditions. Derivatives are usually less liquid than traditional securities and are subject to counterparty risk (the risk that the other party to the contract will default or otherwise not be able to perform its contractual obligations). In addition, some derivatives transactions may involve potentially unlimited losses.

Derivative contracts entered into for hedging purposes may also subject the Series to losses if the contracts do not correlate with the assets, indexes or rates they were designed to hedge. Gains and losses derived from hedging transactions are, therefore, more dependent upon the subadviser's ability to correctly predict the movement of the underlying asset prices, indexes or rates.

As an investment company registered with the SEC, the Series is required to identify on its books (often referred to as "asset segregation") liquid assets, or engage in other SEC-approved measures, to "cover" open positions with respect to certain kinds of derivative instruments. If the Series invests in such instruments and has insufficient cash to meet such requirements, it may have to sell other investments, including at disadvantageous times.

Governments, agencies and/or other regulatory bodies may adopt or change laws or regulations that could adversely affect the Series' ability to invest in derivatives as the Series' subadviser intends. The Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act"), among other things, grants the Commodity Futures Trading Commission (the "CFTC") and SEC broad rulemaking authority to implement various provisions of the Dodd-Frank Act including comprehensive regulation of the over-the-counter ("OTC") derivatives market. The implementation of the Dodd-Frank Act could adversely affect the Series by placing limits on derivative transactions, and/or increasing transaction and/or regulatory compliance costs. For example, the CFTC has recently adopted new rules that will apply a new aggregation standard for position limit purposes, which may further limit the Series' ability to trade futures contracts and swaps.

There are also special tax rules applicable to certain types of derivatives, which could affect the amount, timing and character of the Series' income or loss and hence of its distributions to shareholders by causing holding period adjustments, converting short-term capital losses into long-term capital losses, and accelerating the Series' income or deferring its losses. The Series' use of derivatives may also increase the amount of taxes payable by shareholders or the resources required by the Series or its adviser and/or subadviser(s) to comply with particular regulatory requirements.

Equity Securities

Generally, prices of equity securities are more volatile than those of fixed income securities. The prices of equity securities will rise and fall in response to a number of different factors. In particular, equity securities will respond to events that affect entire financial markets or industries (such as changes in inflation or consumer demand) and to events that affect particular issuers (such as news about the success or failure of a new product). Equity securities also are subject to "stock market risk," meaning that stock prices in general may decline over short or extended periods of time. When the value of the stocks held by the Series goes down, the value of the Series' shares will be affected.

- **Large Market Capitalization Companies Risk.** The value of investments in larger companies may not rise as much as smaller companies, or larger companies may be unable to respond quickly to competitive challenges, such as changes in technology and consumer tastes.
- **Value Stocks Risk.** A company may be undervalued due to market or economic conditions, temporary earnings declines, unfavorable developments affecting the company and other factors, or because it is associated with a market sector that generally is out of favor with investors. Undervalued stocks tend to be inexpensive relative to their earnings or assets compared to other types of stock. However, these stocks can continue to be inexpensive for long periods of time and may not realize their full economic value.

Foreign Investing

Investing in securities of non-U.S. companies involves special risks and considerations not typically associated with investing in U.S. companies, and the values of non-U.S. securities may be more volatile than those of U.S. securities. The values of non-U.S. securities are subject to economic and political developments in countries and regions where

the issuers operate or are domiciled, or where the securities are traded, such as changes in economic or monetary policies, and to changes in currency exchange rates. Values may also be affected by restrictions on receiving the investment proceeds from a non-U.S. country.

In general, less information is publicly available about non-U.S. companies than about U.S. companies. Non-U.S. companies are generally not subject to the same accounting, auditing and financial reporting standards as are U.S. companies. Certain foreign issuers classified as passive foreign investment companies may be subject to additional taxation risk.

- **Currency Rate Risk.** Because the foreign securities in which the Series invests generally trade in currencies other than the U.S. dollar, changes in currency exchange rates will affect the Series' net asset value, the value of dividends and interest earned, and gains and losses realized on the sale of securities. Because the value of the Series' shares is calculated in U.S. dollars, it is possible for the Series to lose money by investing in a foreign security if the local currency of a foreign market depreciates against the U.S. dollar, even if the local currency value of the Series' holdings goes up. Generally, a strong U.S. dollar relative to such other currencies will adversely affect the value of the Series' holdings in foreign securities.
- **Emerging Market Investing Risk.** The risks of foreign investments are generally greater in countries whose markets are still developing than they are in more developed markets. Emerging market countries typically have economic and political systems that are less fully developed, and can be expected to be less stable than those of more developed countries. For example, the economies of such countries can be subject to rapid and unpredictable rates of inflation or deflation. Since these markets are often small, they may be more likely to suffer sharp and frequent price changes or long-term price depression because of adverse publicity, investor perceptions or the actions of a few large investors. They may also have policies that restrict investment by foreigners, or that prevent foreign investors from withdrawing their money at will. Certain emerging markets may also face other significant internal or external risks, including the risk of war and civil unrest. For all of these reasons, investments in emerging markets may be considered speculative.

To the extent that the Series invests a significant portion of its assets in a particular emerging market, the Series will be more vulnerable to financial, economic, political and other developments in that country, and conditions that negatively impact that country will have a greater impact on the Series as compared with a Series that does not have its holdings concentrated in a particular country.

Market Volatility

The value of the securities in which the Series invests may go up or down in response to the prospects of individual companies and/or general economic conditions. Price changes may be temporary or may last for extended periods.

Instability in the financial markets has exposed the Series to greater market and liquidity risk and potential difficulty in valuing portfolio instruments that it holds. In response to financial markets that experienced extreme volatility, and in some cases a lack of liquidity, the US Government has taken a number of unprecedented actions, including acquiring distressed assets from financial institutions and acquiring ownership interests in those institutions. The implications of government ownership and disposition of these assets are unclear. Additional legislation or government regulation may also change the way in which the Series itself is regulated, which could limit or preclude the Series' ability to achieve its investment objective.

Management of the Series

The Adviser

VIA has served as the investment adviser to the Series since November 2010. VIA, located at 100 Pearl Street, Hartford, CT 06103, acts as the investment adviser for over 50 mutual funds and as adviser to institutional clients. As of December 31, 2016, VIA had approximately \$24.4 billion in assets under management. VIA has acted as an investment adviser for over 80 years and is an indirect wholly-owned subsidiary of Virtus Investment Partners, Inc., a publicly traded multi-manager asset management business.

Pursuant to the Investment Advisory Agreement with the Series and subject to the direction of the Trust's Board of Trustees, VIA is responsible for managing the Series' investment program in conformity with the stated policies of the

Series as described in this prospectus. VIA, with the approval of the Trust's Board of Trustees, has selected Duff & Phelps to serve as subadviser and perform the day-to-day portfolio management of the Series. Duff & Phelps is responsible for deciding which securities to purchase and sell for the Series and for placing the Series' transactions.

The Series pays VIA an investment management fee that is accrued daily against the value of the Series' net assets at the following annual rate:

1 st \$250 million	\$250+ million through \$500 million	Over \$500 million
0.75%	0.70%	0.65%

For its last fiscal year, the Series paid advisory fees at the rate 0.75% of its average net assets.

The Trust has entered into an expense limitation agreement with VIA whereby VIA has agreed to reimburse the Series for expenses necessary or appropriate for the operation of the Series (excluding certain expenses, such as front-end or contingent deferred sales charges, taxes, interest, brokerage commissions, unusual or infrequently occurring expenses (such as litigation) and acquired fund fees and expenses, if any) to the extent that such expenses exceed 1.18% of the Series' Class A Shares and 0.93% of the Series' Class I Shares average net assets. This expense limitation agreement is in place through April 30, 2018. After April 30, 2018, VIA may discontinue this expense reimbursement arrangement at any time. Under certain conditions, VIA may recapture operating expenses reimbursed under an expense reimbursement arrangement for a period of three years following the time such reimbursement occurred.

VIA serves as a manager of managers of the Series. In this capacity, VIA: (i) sets the Series' overall investment strategies; (ii) evaluates, selects, and recommends to the Board one or more subadvisers needed to manage all or part of the assets of the Series; (iii) monitors and evaluates the subadvisers' investment programs and results as well as the performance of the subadvisers relative to the applicable benchmark indexes; and (iv) reviews the Series' compliance with its investment objectives, policies and restrictions.

The Trust and VIA have each received an exemptive order from the Securities and Exchange Commission ("SEC") that permits VIA, subject to certain conditions and without the approval of shareholders to: (a) employ a new unaffiliated subadviser for a Series pursuant to the terms of a new subadvisory agreement, in each case either as a replacement for an exiting subadviser or as an additional subadviser; (b) change the terms of any subadvisory agreement; and (c) continue the employment of an existing subadviser on the same subadvisory agreement terms where an agreement has been assigned because of a change in control of the subadviser. In such circumstances, shareholders would receive notice of such action, including the information concerning the new subadviser that normally is provided in a proxy statement.

The Subadviser

Duff & Phelps, an affiliate of VIA, is located at 200 South Wacker Drive, Suite 500, Chicago, IL 60606. Duff & Phelps acts as subadviser to mutual funds and as adviser or subadviser to closed-end mutual funds and to institutional clients. Duff & Phelps (together with its predecessor) has been in the investment advisory business for more than 70 years. As of December 31, 2016, Duff & Phelps had approximately \$10.3 billion in assets under management on a discretionary basis.

From its investment advisory fee, VIA, not the Series, pays Duff & Phelps for its subadvisory services at the rate of 50% of the net advisory fee.

Board of Trustees' Approval of Investment Advisory and Subadvisory Agreements

The Trust's annual report to shareholders for the year ended December 31, 2016 contains a discussion regarding the basis for the Trust's Board of Trustees' approval of the investment advisory and investment subadvisory agreements for the Series.

Portfolio Management

- > ***Frederick A. Brimberg.*** Mr. Brimberg is Senior Managing Director and Senior Portfolio Manager at Duff & Phelps (since August 2016) and Euclid Advisors LLC ("Euclid") (since 2012), each an affiliate of VIA. Prior to joining Euclid, he was senior vice president and international portfolio manager at Avatar Associates (2006 to 2012), where he started the international strategy in 2006. Earlier, he was vice president and portfolio manager at ING Investment Management and its predecessor Lexington Management, with a focus on global equity investing. Mr. Brimberg's career spans 30-plus years in investment management, trading, and capital markets, with positions at Brimberg & Co., and Lehman Brothers.

The statement of additional information (“SAI”) provides additional information about the portfolio manager’s compensation, other accounts managed by the portfolio manager and the portfolio manager’s ownership of securities in the Series.

Risks Associated with Other Investment Strategies and Series Operations

Information about the Series’ principal investment strategies and risks appears in the Fund Summary section and the sections entitled “More About Principal Investment Strategies” and “More About Principal Risks” above. The information below describes other investment strategies that the Series may use that are not principal strategies and the risks of those strategies, arranged in alphabetical order, as well as other operational risks. Further descriptions of these investment strategies and practices can be found in the SAI.

One or more of the following risks may apply to the Series indirectly through its investments in other investment companies, including exchange-traded funds (“ETFs”). The greater an investment in a particular asset class by the Series, the greater the impact to the Series of the risks related to the class.

Convertible Securities

Convertible securities are bonds, debentures, notes, preferred stock, rights, warrants or other securities that may be converted into or exchanged for a prescribed amount of common stock or other security of the same or a different issuer or into cash within a particular period of time at a specified price or formula. A convertible security generally entitles the holder to receive interest paid or accrued on debt securities or the dividend paid on preferred stock until the convertible security matures or is redeemed, converted or exchanged. If a convertible security is called for redemption, the Series may have to redeem the security, convert it into common stock or sell it to a third party at a price and time that is not beneficial for the Series. The value of convertible securities tends to decline as interest rates rise and, because of the conversion feature, tends to vary with fluctuations in the market value of the underlying securities. Securities convertible into common stocks may have higher yields than common stocks but lower yields than comparable nonconvertible securities.

Cybersecurity

With the increased use of technologies such as the Internet to conduct business, the Series have become potentially more susceptible to operational and information security risks through breaches in cybersecurity. In general, a breach in cybersecurity can result from either a deliberate attack or an unintentional event. Cybersecurity breaches may involve, among other things, infection by computer viruses or other malicious software code or unauthorized access to the digital information systems, networks or devices of the Series or their service providers (including, but not limited to, the Series’ investment adviser, transfer agent, custodian, administrators and other financial intermediaries) through “hacking” or other means, in each case for the purpose of misappropriating assets or sensitive information (including, for example, personal shareholder information), corrupting data or causing operational disruption or failures in the physical infrastructure or operating systems that support the Series. Any such cybersecurity breaches or losses of service may cause the Series to lose proprietary information, suffer data corruption or lose operational capacity, which, in turn, could cause the Series to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures, and/or financial loss. While the Series and their service providers have established business continuity plans and risk management systems designed to prevent or reduce the impact of cybersecurity attacks, there are inherent limitations in such plans and systems due in part to the ever-changing nature of technology and cybersecurity attack tactics, and there is a possibility that certain risks have not been adequately identified or prepared for. Cybersecurity risks may also impact issuers of securities in which the Series invest, which may cause the Series’ investments in such issuers to lose value.

Illiquid and Restricted Securities

Certain securities in which the Series invests may be difficult to sell at the time and price beneficial to the Series, for example due to low trading volumes or legal restrictions. When there is no willing buyer or a security cannot be readily sold, the Series may have to sell at a lower price or may be unable to sell the security at all. The sale of such securities may also require the Series to incur expenses in addition to those normally associated with the sale of a security.

Investments in Other Investment Companies and Exchange-Traded Funds

The Series may invest in securities of other investment companies, including shares of closed-end investment companies, unit investment trusts, and open-end investment companies. Investing in other investment companies

involves substantially the same risks as investing directly in the underlying instruments, but may involve additional expenses at the investment company-level, such as portfolio management fees and operating expenses. Certain types of investment companies, such as closed-end investment companies, issue a fixed number of shares that trade on a stock exchange or over-the-counter at a premium or a discount to their net asset value. Others are continuously offered at net asset value.

The Series may invest in other investment companies to take advantage of investment opportunities in certain countries where the Series otherwise would not be able to invest or where the size of a Series investment in a particular country would be too small.

The Series may also acquire ETFs or similar securities in order to achieve market or industry exposure pending direct investments in equity securities. An ETF is an investment company the shares of which are continuously offered at net asset value only in large aggregations, but are traded on an exchange in smaller amounts.

Assets invested in other investment companies incur a layering of expenses including operating costs, advisory fees and administrative fees that investors in the Series will indirectly bear.

Leverage

When the Series makes investments in futures contracts, forward contracts, swaps and other derivative instruments, the futures contracts, forward contracts, swaps and certain other derivatives provide the economic effect of financial leverage by creating additional investment exposure, as well as the potential for greater loss. When the Series uses leverage through activities such as borrowing, entering into short sales, purchasing securities on margin or on a when-issued basis, or purchasing derivative instruments in an effort to increase its returns, the Series has the risk of magnified capital losses that occur when losses affect an asset base, enlarged by borrowings or the creation of liabilities, that exceeds the net assets of the Series. The value of the shares of the Series employing leverage will be more volatile and sensitive to market movements. Leverage may also involve the creation of a liability that requires the Series to pay interest.

Operational

An investment in the Series, like any mutual fund, can involve operational risks arising from factors such as processing errors, human errors, inadequate or failed internal or external processes, failures in systems and technology, changes in personnel and errors caused by third-party service providers. The occurrence of any of these failures, errors or breaches could result in a loss of information, regulatory scrutiny, reputational damage or other events, any of which could have a material adverse effect on the Series. While the Series seeks to minimize such events through controls and oversight, there may still be failures that could cause losses to the Series.

Securities Lending

The Series may loan portfolio securities with a value up to one-third of its total assets to increase its investment returns. If the borrower is unwilling or unable to return the borrowed securities when due, the lending Series can suffer losses. In addition, there is a risk of delay in receiving additional collateral or in the recovery of the securities, and a risk of loss of rights in the collateral, in the event that the borrower fails financially. There is also a risk that the value of the investment of the collateral could decline, causing a loss to the Series.

Small and Medium Market Capitalization Companies

Small and medium-sized companies often have narrower markets, fewer products or services to offer, and more limited managerial and financial resources than larger, more established companies. As a result, the performance of small and medium-sized companies may be more volatile, and they may face a greater risk of business failure, which could increase the volatility and risk of loss to the Series.

Distribution Plan (Class A Shares only)

The Trust, on behalf of each series of the Trust, including with respect to the Class A Shares of the Virtus Duff & Phelps International Series, has adopted a plan pursuant to Rule 12b-1 under the Investment Company Act of 1940 (the "Distribution Plan"). Pursuant to the Distribution Plan, the Trust has entered into a Distribution Agreement relating to the Distribution Plan with VP Distributors, LLC (the "Distributor") located at 100 Pearl Street, Hartford, CT 06103. The Distributor is an affiliate of the adviser, and serves as principal underwriter for the Trust. The Distribution Plan permits the use of Series assets to help finance the distribution of the shares of the Series.

Under the Distribution Plan, the Trust, on behalf of each Series, is permitted to pay to the Distributor (who may in turn pay other service providers) up to a total of 0.25% of the average daily net assets of Class A of the Series, as payment for services rendered in connection with the distribution of shares. Because these fees are paid out of Series assets on an ongoing basis, over time these costs will increase the cost of your investment and may cost you more than other types of sales charges.

More About the Trust and the Series

Organization of the Trust

The Trust was organized as a Massachusetts business trust on February 18, 1986. It was subsequently reorganized into a Delaware statutory trust on February 14, 2011. The Trust currently consists of nine series of which the Series is one. The Trust's business and affairs are managed by its Board of Trustees.

Shares of Beneficial Interest

Shares (including fractional shares) of the Series have equal rights with regard to voting, redemptions, dividends, distributions and liquidations with respect to the Series. All voting rights of the separate accounts as shareholders are passed through to the variable contract owners. Shareholders of all series of the Trust currently vote on the election of Trustees and other matters. On matters affecting an individual series such as the Series (such as approval of an advisory or subadvisory agreement or a change in fundamental investment policies), a separate vote of that series is required. On matters affecting an individual class (such as approval of matters relating to a Distribution Plan for a particular class of shares), a separate vote of that class is required. The Trust is not required to hold annual shareholder meetings.

Series shares attributable to any insurance company assets and Series shares for which no timely instructions from variable contract owners are received will be voted by the appropriate insurance company in the same proportion as those shares for which instructions are received.

The assets received by the Trust for the issue or sale of shares of the Series, and all income, earnings, profits and proceeds thereof, subject only to the rights of creditors, are allocated to the Series, and constitute the underlying assets of the Series. The underlying assets of the Series are required to be segregated on the books of account, and are to be charged with the expenses of the Series and with a share of the general expenses of the Trust. Any general expenses of the Trust not readily identifiable as belonging to a particular series shall be allocated by or under the direction of the Trustees in such manner as the Trustees determine to be fair and equitable.

Taxes

The Trust intends for the Series to qualify as a regulated investment company ("RIC") by satisfying the requirements under Subchapter M of the Internal Revenue Code of 1986, as amended (the "Code"), including requirements with respect to diversification of assets, distribution of income, and sources of income. In general, a series that qualifies as a RIC will be relieved of federal income tax on its net investment income and net capital gains distributed to its shareholders. In addition, the Trust intends for the Series to comply with the investment diversification requirements for variable contracts contained in the Code. Moreover, the Trust intends to distribute sufficient net investment income and net capital gains of the Series to avoid imposition of any federal excise tax.

Accordingly, the Trust intends that, at the close of each quarter of the taxable year, (i) not more than 25% of the market value of the Series' total assets will be invested in the securities of a single issuer and (ii) with respect to 50% of the market value of the Series' total assets, not more than 5% of the market value of the Series' total assets will be invested in the securities of a single issuer and the Series will not own more than 10% of the outstanding voting securities of a single issuer.

Actual and deemed distributions of ordinary income and net capital gains generally are taxable to the Series' shareholders, which in this case are the separate accounts. Because the sole shareholders of the Series will be the separate accounts, no discussion is included in this prospectus as to the federal income tax consequences at the shareholder level. For information concerning the federal income tax consequences to purchasers of the variable contracts, please see the variable contract prospectuses.

Disruptive Trading and Market Timing

As an investment vehicle for variable contracts, which are designed as long-term investments, the Series is not appropriate for “market timing” or other trading strategies that entail rapid or frequent investment and trading. Frequent purchases, redemptions and transfers, transfers into and then out of the Series in a short period of time, and transfers of large amounts at one time may be indicative of market timing and otherwise disruptive trading (“Disruptive Trading”), which can have risks and harmful effects for other investors. These risks and harmful effects include:

- dilution of the interests of long-term investors, if market timers or others transfer into the Series at prices that are below the true value or exchange out of the Series at prices that are higher than the true value;
- an adverse effect on portfolio management, such as causing the Series to maintain a higher level of cash than would otherwise be the case, or causing the Series to liquidate investments prematurely; and
- increased brokerage and administrative expenses.

Funds that invest primarily in international securities may be more susceptible to pricing arbitrage opportunities because of time zone differences between the closing of international and domestic markets. Funds that invest primarily in small and mid-cap securities may be more susceptible to arbitrage opportunities because of the less liquid nature of small and mid-cap securities. In addition, funds that hold significant investments in high yield bonds may also be susceptible to market timing because high yield bonds are often thinly traded so that their market prices may not accurately reflect current market developments. To the extent that the Series invests in these types of securities, it may be more susceptible to the risks of Disruptive Trading.

In order to attempt to protect Trust investors, the Trust’s Board of Trustees has adopted market timing policies reasonably designed to discourage Disruptive Trading. The Trust reserves the right to amend these policies at any time without prior notice. Because the record owners of the Series are the insurance companies and not the variable contract owners, the Trust is not ordinarily in a position to monitor for or uncover Disruptive Trading by variable contract owners. Therefore, under the Trust’s policies, the Trust delegates to each insurance company the duty to establish and maintain policies and procedures designed to detect, monitor and deter (including, without limitation, by rejecting specific purchase orders) investors (or their agents) whose purchase and redemption activity follows a Disruptive Trading pattern, and to take such other actions as the insurance company may deem necessary to discourage or reduce Disruptive Trading activities. An insurance company may only modify such policies and procedures if it provides reasonable notice to the Trust and the Trust’s Chief Compliance Officer. Please see your variable contract prospectus for information relating to applicable restrictions on purchases or transfers through your variable contract.

The Trust may also take certain actions to stop Disruptive Trading, including imposing redemption fees for the Series and ceasing sales of additional shares of the Series to a separate account through which variable contract owners are engaging in Disruptive Trading. Because the Trust reserves discretion in applying these policies, they may not be applied uniformly. In addition, the Trust, as required under SEC regulations, has entered into an agreement with each insurance company under which the insurance companies have agreed to provide the Trust or its designee with information about variable contract owner transactions in the Series upon request.

Although the Trust will endeavor to ensure that each insurance company can and does identify and deter Disruptive Trading by its variable contract owners, the Trust cannot control their efforts or guarantee their success at deterrence. In addition, the Trust cannot guarantee that monitoring by the insurance companies and the Trust will be 100% successful in detecting all Disruptive Trading activity. Consequently, there is a risk that some investors could engage in Disruptive Trading while others will bear the effects of their Disruptive Trading activities.

Portfolio Holdings

A description of the Trust’s policies and procedures with respect to the disclosure of the Series’ portfolio securities is available in the SAI.

Investing in the Series

Shares of the Series are not available to the public directly. You may invest in the Series by buying a variable accumulation annuity contract or a variable universal life insurance policy from an insurance company and directing the allocation of the net purchase payment(s) to the investment option corresponding to the Series. The appropriate insurance company will, in turn, invest payments in shares of the Series as the investor directs at the net asset value next determined.

The Series offers Class A Shares and Class I Shares. Both share classes may not be available for purchase through your variable contract. See your variable contract prospectus for a description of the available share class(es).

Sales Charge and Surrender Charges

The Series does not assess any sales charge, either when it sells or when it redeems securities. The sales charges that may be assessed under the variable contracts or policies are described in the variable contract prospectuses, as are other charges.

Determination of Net Asset Value

The net asset value (“NAV”) per share of the Series is determined as of the close of regular trading of the New York Stock Exchange (“NYSE”) on days when the NYSE is open for trading. Since the Series does not price securities on weekends or United States national holidays, but foreign markets may be open on these days, the value of any foreign assets of the Series and, therefore, the Series’ NAV may be significantly affected on days when an investor has no access to the Series. The NAV per share of the Series is determined by adding the values of all securities and other assets of the Series, subtracting liabilities and dividing by the total number of outstanding shares of the Series. Assets and liabilities are determined in accordance with generally accepted accounting principles and applicable rules and regulations of the SEC.

Assets: Equity securities are valued at the official closing price (typically last sale) on the exchange on which the securities are principally traded or, if no closing price is available or there had been no sale that day, at the last bid price. Debt securities are valued on the basis of broker quotations or valuations provided by a pricing service which utilizes information with respect to recent sales, market transactions in comparable securities, quotations from dealers, and various relationships between securities in determining value. Shares of other investment companies are valued at their respective NAVs. All other securities and assets are valued at their fair value as determined in good faith by or under the direction of the Trustees. Other assets, such as accrued interest, accrued dividends and cash are also included in determining the Series’ NAV.

A security that is listed or traded on more than one exchange is valued at the quotation on the exchange determined to be the primary exchange for such security by the Trustees or their delegates. Because of the need to obtain prices as of the close of trading on exchanges throughout the world, the calculation of the NAV of the Series may not take place contemporaneously with the determination of the prices of certain portfolio securities of the Series. All assets and liabilities initially expressed in foreign currency values will be converted into United States dollar values using the foreign currency exchange rate of such currencies against United States dollars as last quoted by any recognized dealer. If an event were to occur after the value of an investment was so established but before the NAV per share was determined, which was likely to materially change the NAV, then the instrument would be valued using fair value considerations by the Board or its delegates.

Liabilities: Accrued liabilities for the Series-specific expenses (if any) and other liabilities are deducted from the assets of the Series. Accrued expenses and liabilities that are not Series-specific are allocated among the series of the Trust in proportion to each series’ net assets except where an alternative allocation can be more appropriately made.

Fair Valuation

If market quotations are not readily available or available prices are not reliable, the Series determines a “fair value” for an investment according to policies and procedures approved by the Board of Trustees. The types of assets for which such pricing might be required include: (i) securities whose trading has been suspended; (ii) securities where the trading market is unusually thin or trades have been infrequent; (iii) debt securities that have recently gone into default and for which there is no current market quotation; (iv) a security whose market price is not available from an independent pricing source and for which otherwise reliable quotes are not available; (v) securities of an issuer that has entered into a restructuring; (vi) a security whose price as provided by any pricing source does not, in the opinion of the adviser/subadviser, reflect the security’s market value; (vii) foreign securities subject to trading collars for which no or limited trading takes place; (viii) securities where the market quotations are not readily available as a result of “significant” events; and (ix) securities whose principal exchange or trading market is closed for an entire business day on which the Series needs to determine its NAV. This list is not inclusive of all situations that may require a security to be fair valued, nor is it intended to be conclusive in determining whether a specific event requires fair valuation.

The value of any portfolio security held by the Series for which market quotations are not readily available shall be determined in good faith and in a manner that assesses the security’s “fair value” on the valuation date (i.e., the amount that the Series might reasonably expect to receive for the security upon its current sale), based on a consideration of all available facts and all available information, including, but not limited to, the following: (i) the fundamental analytical

data relating to the investment; (ii) the value of other relevant financial instruments, including derivative securities, traded on other markets or among dealers; (iii) an evaluation of the forces which influence the market in which these securities are purchased and sold (*e.g.*, the existence of merger proposals or tender offers that might affect the value of the security); (iv) the type of the security; (v) the size of the holding; (vi) the initial cost of the security; (vii) trading volumes on markets, exchanges or among broker-dealers; (viii) price quotes from dealers and/or pricing services; (ix) values of baskets of securities traded on other markets, exchanges, or among dealers; (x) changes in interest rates; (xi) information obtained from the issuer, analysts, other financial institutions and/or the appropriate stock exchange (for exchange traded securities); (xii) an analysis of the company's financial statements; (xiii) government (domestic or foreign) actions or pronouncements (xiv) recent news about the security or issuer; (xv) whether two or more dealers with whom the adviser/subadviser regularly effects trades are willing to purchase or sell the security at comparable prices; and (xvi) other news events or relevant matters.

Certain foreign common stocks may be fair valued in cases where closing prices are not readily available or are deemed not reflective of readily available market prices. For example, events (such as movement in the U.S. securities market, or other regional and local developments) may occur between the time that foreign markets close (where the security is principally traded) and the time that the Series calculates its NAV (generally, the close of regular trading on the NYSE) that may impact the value of securities traded in these foreign markets. In such cases, information from an external vendor may be utilized to adjust closing market prices of certain foreign common stocks to reflect their fair value. Because the frequency of significant events is not predictable, fair valuation of certain foreign common stocks may occur on a frequent basis.

The value of a security, as determined using the Series' fair valuation procedures, may not reflect such security's market value.

Financial Highlights

The financial highlights table provided below is intended to help you understand the Series' financial performance for the past five years. Certain information reflects financial results for a single share. The total returns in the table represent the rate that an investor would have earned (or lost) on an investment in the Series (assuming reinvestment of all dividends and distributions). These figures do not include the imposition of separate account fees or expenses. If such fees or expenses were reflected, performance would be lower. This information has been audited by PricewaterhouseCoopers LLP, the independent registered public accounting firm for the Series. Their report and the Series' financial statements are included in the Series' annual report to shareholders and incorporated by reference in the SAI.

Footnote Legend:

- (1) Computed using average shares outstanding.
- (2) The total return does not include the expenses associated with the annuity or life insurance policy through which you invest.
- (3) The Series will also indirectly bear their prorated share of expenses of any underlying funds in which it invests. Such expenses are not included in the calculation of this ratio.
- (4) Blended net expense ratio due to a change in expense limitation agreements during the fiscal year.
- (5) Earnings credits from Custodian were not material, as reflected in the Statements of Operations, and had no impact on Financial Highlights.
- (6) Inception Date.
- (7) Annualized.
- (8) Not Annualized.
- (9) Net expense ratios include proxy expenses.
- (10) Custody fees reimbursed were excluded from the Ratio of Net Expenses to Average Net Assets and Ratio of Net Investment Income (Loss) to Average Net Assets. If included the impact would have been to lower the Ratio of Net Expenses and increase the Ratio of Net Investment Income (Loss) by 0.04%.
