Firm Overview

As of December 31, 2017

Kayne Anderson Rudnick
Investment Management

Profile

- Originally established to manage founder capital
- Specialization in small cap equity strategies with over three decades of experience
- A differentiated “business analyst” investment approach focusing on high-quality businesses
- A disciplined and repeatable investment process that produces high-conviction portfolios
- A wholly owned, independent subsidiary of Virtus Investment Partners

At a Glance

Year Founded	1984
Headquarters	Los Angeles, CA
AUM	\$18.9 billion
Number of Investment Professionals	14
Average Investment Experience	16 Years

Investment Philosophy

We believe that purchasing high-quality businesses with competitive protections at attractive valuations will achieve excess returns over a complete market cycle

Investment Objectives

- To achieve a return meaningfully above that of the Russell 2000® Growth Index
- To achieve this return objective with a portfolio that exhibits lower overall risk characteristics

Security	Contribution	Comments
Autohome	+8.08%	Autohome shares increased meaningfully during 2017 as the company refined its strategy and exited a money-losing new car transaction business. This allowed the strong profitability of its core business to re-emerge and translated into double-digit growth in revenue and earnings-per-share for the trailing 12 months. Autohome's financial results are also benefiting from the ongoing secular shift of ad budgets from offline to online media. Given Autohome's strong competitive positioning, improved capital allocation and the expected long-term growth of the Chinese car market, we remain owners of the business.
National Research	+5.09%	National Research saw its shares increase in the quarter after announcing consistent sales and earnings growth, as well as revealing a plan to do away with the 2-class share trading system that has seemingly confused investors as to which shares were more reflective of the business. We believe this action provides more clarity. As the health care community focuses more on outcomes-based reimbursement, we believe that National Research should be a direct beneficiary.
Ollie's Bargain Outlet Holdings	+4.95%	Throughout 2017, Ollie's continued to defy the doom and gloom in retail and deliver healthy same-store sales growth and margins. The company is focused on delivering best-in-class closeout deals, and as it grows, it continues to be the first choice for vendors looking to unload merchandise. The company has also slowly tilted inventory toward consumables, which have helped to increase repeat purchasing as customers see Ollie's as more than just a once-a-year, deal-hunting adventure. As long as Ollie's balances its mix properly, we expect the growth in the store base to continue at a healthy rate, helped by retail closures leading to new real estate opportunities.

Security	Contribution	Comments
Shutterstock <i>(Sold Q1 2017)</i>	(1.04%)	Shutterstock stock had rebounded in the first half of 2016 as concerns regarding the competitive threat from Adobe's new stock photo offering abated. However, a meaningful slowdown in revenue growth over the next two quarters sent the share price lower. Our original investment thesis was based on the network effects of Shutterstock's core stock photo marketplace business. Even at lower growth rates, that marketplace business is very profitable and valuable. Unfortunately, the profits from that great business will remain depressed as management seeks growth by investing capital to grow other parts of the company where Shutterstock's competitive advantage is less clear. Thus, we sold our position in the first quarter.
Abaxis	(0.48%)	Abaxis saw its shares fall in the last year after experiencing a weak sales quarter as its vet business grew only slightly while the medical business declined due to distributor de-stocking. The company is ramping up its R&D efforts that should drive the top line, but this disconnect with the financials could continue for a few more quarters. The solid balance sheet and high consumables mix, combined with a re-rating of the shares with future growth ahead, keeps us as shareholders.
Emerald Expositions Events <i>(Purchased Q3 2017)</i>	(0.23%)	Since we purchased our position in July of 2017, Emerald has underperformed due to a couple of negative one-time occurrences at its larger trade shows. We expect these issues to be resolved quickly and believe Emerald's advantaged position in the trade show industry will enable considerable free-cash-flow generation going forward.

Sales

Small Cap Sustainable Growth Portfolio Quarter Ending December 31, 2017

Kayne Anderson Rudnick
Investment Management

Sales	Reasons
Ollie's Bargain Outlet Holdings—Trimmed Position	We trimmed our position due to the stock's high valuation. Ollie's is successfully expanding its store base into new geographies and gaining scale purchasing advantages as it grows. The company's in-store experience is proving resilient despite the broader shift to online consumer activity. Nevertheless, the shares' current valuation discounts significant future growth.
National Research —Trimmed Position	National Research's stock appreciated abruptly on the announced dissolution of its suboptimal dual share-class structure. Although the business has a durable competitive position in the hospital industry as a provider of benchmarking data and is very profitable, the stock is priced at a high valuation given its prospects for single-digit revenue growth and modest operating leverage so we trimmed our position.

Market Outlook

U.S. Economy

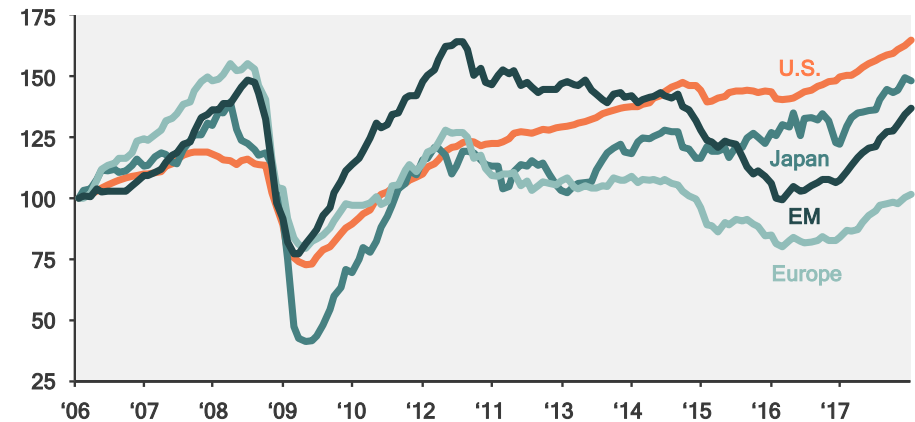

Kayne Anderson Rudnick
Investment Management

The U.S. economy should accelerate modestly. International economies have finally started to accelerate, improving the outlook for global economic growth rates.

- Corporate earnings and revenue continue to grow in constant currency and companies are maintaining historically high operating margins. 2017 earnings per share (EPS) for the S&P 500 was up double-digits. S&P 500 EPS should continue to grow in the mid-to-high single-digit growth range over the next 12-to-18 months. Additionally, international and emerging markets reported earnings are improving.
- U.S. GDP should improve to the 2.5% to 3.5% range over the next two years due to tax reform. The stock market has already discounted some of these benefits.
- Corporate cash is at all-time highs and improving, leading to share buybacks, dividend increases and acquisitions. Companies have become more disciplined about their capital allocation. M&A should pick up in 2018 due to repatriation, and IPO activity should increase as well.
- Household net wealth continues to hit a new high. Consumer confidence is back to 2007 levels. The labor market continues to improve meaningfully. Wage growth remains under control despite very low levels of unemployment. Small business optimism has substantially improved since the election.
- Many energy-related businesses are quickly recovering from recession conditions. Sustainability of the price of energy is an important issue over the next couple of years.
- Innovation is alive and well with the U.S. creating many investment opportunities in industries such as technology, health care and industrials.
- Bond yields and mortgage rates have continued to stay fairly low by historical standards, which has helped real estate markets continue to recover.

Global Earnings

EPS, U.S. Dollar, NTMA, January 2006 = 100

NFIB Small Business Optimism Index

Data as of December 31, 2017.

Global Earnings chart uses MSCI indices for all regions/countries, except for the U.S., which is the S&P 500. All indices use IBES aggregate earnings estimates, which may differ from earnings estimates elsewhere in the materials. MSCI Europe includes the Eurozone as well as countries not in the currency bloc, such as the U.K., Switzerland, Sweden and Norway (which collectively make up 49% of the overall index). Data is obtained from FactSet Research Systems, MSCI, Thomson Reuters, Standard and Poor's, J.P. Morgan Asset Management and Strategas and is assumed to be reliable. Past performance is no guarantee of future results.

Global growth prospects are solid through year end, providing support for risk-based assets globally.

- At a 2.4% yield on the U.S. 10-year bond, a higher initial yield combined with a fairly stable U.S. dollar makes the U.S. bond market very attractive to foreign investors.
- European sovereign debt rates continue to be fairly stable, business activity has improved, and European banks have started to recover due to a steepening yield curve. Italy is finally addressing some of their banking problems.
- European inflation is very benign but is getting closer to its targets. Yields have risen this quarter, lifting many European countries out of a negative interest rate environment.
- Chinese economic growth rates have stabilized in 2017, albeit at lower rates than historically. The transition to a consumption-led economy will take time, but is clearly occurring.
- Emerging market growth rates and currencies are showing signs of improvement over the last year. Uncertainty about U.S. trade policies may slow down the recovery in progress, but initial negotiations appear much better than expected with NAFTA still a risk.

Global GDP Growth and Corporate Profits

Year-Over-Year Growth, Nominal GDP, MSCI AC World Trailing EPS

EM Earnings by Region

EPS for Next 12-Month Consensus, U.S. Dollar, Rebased to 100

Data as of December 31, 2017.

Nominal GDP used is based on purchasing power parity (PPP) valuation of country GDP. 2017 and 2018 nominal GDP figures are IMF estimates. Earnings used are U.S. dollar trailing 12-month sum earnings per share figures. Data is obtained from FactSet Research Systems, IMF, MSCI, Consensus Economics and J.P. Morgan Asset Management and is assumed to be reliable. Past performance is no guarantee of future results.

Potential Economic Risks:

- How will the long end of the bond market continue to react to the Fed's desire to raise short-term rates three times in 2018 and unwind the balance sheet?
- Significant increases in energy prices and wage gains could lead to a surge in the inflation outlook.
- A hard landing in China could slow global GDP materially. Although receding, it is still a risk due to debt levels.
- Does the European Central Bank pull back prematurely on QE as Europe is recovering?
- Global deflation, not inflation, continues to be principal risk, but inflation expectations are finally rising somewhat, although still short of targets.
- Continued uncertainty surrounding global trade, travel and immigration policy in the U.S.

Price of Oil

Brent Crude, Nominal Prices, USD/Barrel

Yield Curve

U.S. Treasury Yield Curve

Data as of December 31, 2017.

Brent crude prices are monthly averages in USD using global spot ICE prices. Data is obtained from FactSet Research Systems, Federal Reserve and J.P. Morgan Asset Management and is assumed to be reliable. Past performance is no guarantee of future results.

We continue to believe that the risk/reward ratio for equities over the long term is favorable on an absolute basis and particularly relative to fixed income.

- As consumer confidence stays strong, there is potential for P/E ratios to improve slightly. Retail investors still are not fully engaged in the equity market.
- Equity valuations remain reasonable by historic measures, both at absolute levels but particularly relative to interest rates.
- Foreign markets are finally supporting U.S. EPS growth rates, particularly for large multinationals.
- With favorable corporate cash flow, investors are being rewarded with increased share buybacks, dividends and occasional acquisitions.
- Corporate profit margins are still being maintained at very high historical levels.
- Due to tax reform, we believe high-quality businesses with protected markets are a better place to invest than lower quality companies operating in more competitive markets which will pass on these savings to their customers eventually.
- Investors should expect more modest equity returns going forward (6% to 8% range over time) based on the maturity of this economy and business cycle. Volatility has been very low since the election and we are overdue for some type of correction, but the longer term outlook is still favorable.

S&P 500® Index: Forward P/E Ratio

Valuation Measure	Description	Latest	25-year avg.*	Std. dev. Over-/under-valued
P/E	Forward P/E	18.2x	16.0x	0.7
CAPE	Shiller's P/E	32.4	26.4	1.0
Div. Yield	Dividend Yield	2.0%	2.0%	0.1
P/B	Price to book	3.1	2.9	0.2
P/CF	Price to cash flow	12.8	10.7	1.1
EY Spread	EY minus Baa yield	1.3%	-0.2%	-0.8

Data as of December 31, 2017.

*P/CF is a 20-year average due to cash flow data availability.

Price to earnings is price divided by consensus analyst estimates of earnings per share for the next 12 months as provided by IBES since December 1989, and FactSet for December 31, 2017. Average P/E and standard deviations are calculated using 25 years of FactSet history. Shiller's P/E uses trailing 10-years of inflation-adjusted earnings as reported by companies. Dividend yield is calculated as the next 12-month consensus dividend divided by most recent price. Price to book ratio is the price divided by book value per share. Price to cash flow is price divided by NTM cash flow. EY minus Baa yield is the forward earnings yield (consensus analyst estimates of EPS over the next 12 months divided by price) minus the Moody's Baa seasoned corporate bond yield. Std. dev. over-/under-valued is calculated using the average and standard deviation over 25 years for each measure. Data is obtained from FactSet Research Systems, FRB, Thomas Reuters, Robert Shiller, Standard and Poor's and J.P. Morgan Asset Management and is assumed to be reliable. Past performance is no guarantee of future results.

KAR Small Cap Sustainable Growth
 Russell 2000[®] Growth Index
 Small Cap Growth Universe

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation.

The Small Cap Growth Universe includes all managers categorized in the small cap growth asset class by eVestment.

Returns for the Kayne Anderson Rudnick composite are preliminary and are gross of fees unless otherwise specified. For further details on the composite, please see the disclosure statement in this presentation. Data is obtained from FactSet Research Systems and is assumed to be reliable. Past performance is no guarantee of future results. Management fees are described in Part II of our form ADV, which is available upon request. Gross annual returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Net annual returns have been calculated after the deduction of an assumed maximum annual fee of 3%. The effect on performance would grow at a compounded rate. Over a five-year period, if a \$250,000 portfolio had an annual return of 10%, it would grow to \$402,628. The net compounded effect of a 3% annual investment management fee would total \$51,990 and result in a portfolio value of \$350,638.

*January 1, 1998

This material is deemed supplemental and complements the performance and disclosure at the end of this presentation.

Returns for the Kayne Anderson Rudnick composite are preliminary. All periods less than one year are total returns and are not annualized. For further details on the composite, please see the disclosure statement in this presentation. Data is obtained from FactSet Research Systems and is assumed to be reliable. Numbers may not always add up due to rounding. Past performance is no guarantee of future results.

IMPORTANT RISK CONSIDERATIONS: Equity Securities: The market price of equity securities may be adversely affected by financial market, industry, or issuer specific events. Focus on a particular style or on small or medium-sized companies may enhance that risk. **Limited Number of Investments:** Because the fund has a limited number of securities, it may be more susceptible to factors adversely affecting its securities than a less concentrated fund. **Industry/Sector Concentration:** A fund that focuses its investments in a particular industry or sector will be more sensitive to conditions that affect that industry or sector than a non-concentrated fund.

Disclosure

Small Cap Sustainable Growth Portfolio

Kayne Anderson Rudnick
Investment Management

Kayne Anderson Rudnick Investment Management, LLC claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. Kayne Anderson Rudnick Investment Management, LLC has been independently verified for the period from January 1, 1999 through December 31, 2016.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS® standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS® standards. The Small Cap Sustainable Growth Wrap Composite has been examined for the period from January 1, 1999 through December 31, 2016. The verification and performance examination reports are available upon request.

Kayne Anderson Rudnick Investment Management, LLC, a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. Kayne Anderson Rudnick Investment Management, LLC manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary Small Cap Sustainable Growth Wrap Portfolios. Small Cap Sustainable Growth Wrap Portfolios are invested in equity securities with market capitalizations in line with the Russell 2000® Growth Index, that have market control, rising free cash flow, shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Growth Index. The Russell 2000® Growth Index is a market capitalization-weighted index of growth-oriented stocks of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The composite was created in July 2003. A list of composite descriptions and policies for valuing portfolios, calculating performance and preparing compliant presentations are available upon request.

Beginning on January 1, 2006, sub-advisory wrap fee portfolios are also included in composite results. Each sub-advisory relationship is included in the composite as one account. Prior to January 1, 2011, accounts that experienced a significant cash flow, defined as aggregate flows that exceeded 25% of the account's beginning of period market value, were temporarily removed from the composite. Prior to December 31, 2010, the composite minimum was \$100,000.

The standard wrap fee schedule in effect is 3.00% on total assets. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part IIA of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance. Performance results include the reinvestment of all income. Pure gross returns do not reflect the deduction of any expenses, including trading costs. Prior to December 31, 2005, net annual returns are calculated by deducting 1/4th of an assumed maximum annual wrap fee of 3% on a quarterly basis. Beginning January 1, 2006, net annual returns are calculated using actual fees incurred. If no fee data is provided by wrap sponsors, the maximum annual wrap fee of 3% is used to calculate net of fee performance. Beginning January 1, 2016, net annual returns are calculated by deducting 1/12th of an assumed maximum annual wrap fee of 3% on a monthly basis. Wrap fees include all charges for trading costs, portfolio management, custody and other administrative expenses

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using gross returns) and the benchmark for the 36-month period is presented starting December 31, 2012, because prior to January 1, 2010, the composite return was calculated quarterly and 36 monthly returns are not available.

3-Yr Annualized Standard Deviation (%)		
December 31	Composite	Benchmark
2012	15.36	21.01
2013	11.96	17.52
2014	11.97	14.02
2015	13.80	15.16
2016	14.67	16.91

Year	Total Firm Assets (\$ millions)	Total Composite Assets (\$ millions)	Wrap Accounts as % of Composite Assets	Accounts at Year End	Pure Gross Annual Return (%)*	Net Annual Return (%)	Russell 2000® Growth Index Annual Return (%)	Internal Dispersion
2007	5,392	147	100%	9	(0.61)	(2.14)	7.05	0.20
2008	3,445	74	100%	12	(33.73)	(34.93)	(38.54)	0.99
