Credit Ratings noted herein are calculated based on S&P, Moody's and Fitch ratings. Generally, ratings range from AAA, the highest quality rating, to D, the lowest, with BBB and above being called investment grade securities. BB and below are considered below investment grade securities. If the ratings from all three agencies are available, securities will be assigned the median rating based on the numerical equivalents. If the ratings are available from only two of the agencies, the more conservative of the ratings will be assigned to the security. If the rating is available from only one agency, then that rating will be used. Ratings do not apply to a fund or to a fund's shares. Ratings are subject to change.

Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. The U.S. dollar is the currency used to express performance. Returns include the reinvestment of all income. The annual composite dispersion presented is an asset-weighted standard deviation calculated for the wrap sponsors in the composite the entire year.

Pure Gross returns are presented as supplemental information, do not reflect the deduction of any trading costs, fees or expenses and are presented for comparison purposes only. Net returns are calculated by subtracting on a monthly basis the highest assumed wrap fee (2.50% annually or 0.21% per month) from the gross composite monthly return. The assumed wrap fee includes all charges for portfolio management, trading costs, custody and other administrative fees.

Actual wrap fees vary by Program Sponsor. Please refer to the Program Sponsor's ADV 2A for a full disclosure of the fee schedule for wrap fees. Returns realized by clients will be reduced by the actual wrap fee rates and rates incurred by clients will vary.

## IMPORTANT RISK CONSIDERATIONS

**Credit & Interest:** Debt securities are subject to various risks, the most prominent of which are credit and interest rate risk. The issuer of a debt security may fail to make interest and/or principal payments. Values of debt securities may rise or fall in response to changes in interest rates, and this risk may be enhanced with longer-term maturities. **ABS/MBS:** Changes in interest rates can cause both extension and prepayment risks for asset- and mortgage-backed securities. These securities are also subject to risks associated with the repayment of underlying collateral. **Foreign & Emerging Markets:** Investing internationally, especially in emerging markets, involves additional risks such as currency, political, accounting, economic, and market risk.

## DEFINITIONS & DISCLOSURES

Bonds offer a relatively stable level of income, although bond prices will fluctuate providing the potential for principal gain or loss. Intermediate-term, higher quality bonds generally offer less risk than longer-term bonds and a lower rate of return. Generally, a Portfolio's fixed income securities will decrease in value if interest rates rise and vice versa. Although a Portfolio's yield may be higher than that of fixed income strategies that purchase higher rated securities, the potentially higher yield is a function of the greater risk of that strategy's underlying securities.
