

Small Cap Quality Value Portfolio

First Quarter 2017 | Managed Accounts

Portfolio Review

The Small Cap Quality Value portfolio outperformed the Russell 2000 Value Index during the first quarter. The outperformance was primarily driven by strong stock selection in the consumer staples and producer durables sectors. Performance was primarily hurt by negative stock selection in the health care sector and an underweight in utilities.

Positions that contributed most positively to performance during the quarter were National Beverage and SiteOne Landscape Supply. Sales of National Beverage's LaCroix brand helped the company's overall sales grow 20%, driven by a more than 50% increase in LaCroix's sales. As the market has begun to price in the potential for LaCroix to be a billion dollar brand for National Beverage, the stock has continued to move meaningfully higher. Good organic daily sales growth in the quarter, along with management guidance for double-digit earnings growth for 2017, helped propel SiteOne's stock price higher. Longer-term, the company is still trading at a lower multiple than similar high-quality distribution businesses. What's more, the company and industry consolidation is still in its early stages.

Positions that contributed most negatively to performance during the quarter were Sally Beauty and Cass Information Systems. Traffic continues to be a challenge in the core Sally Beauty stores—though the efforts to modernize the fleet and products have led to better conversion. There is also concern that growth at Beauty Systems Group, the professional stores, could falter in the coming year. Cass Information Systems lagged after rising sharply in November 2016 following the U.S. presidential election. The sluggishness was driven by investor expectations of rising short-term interest rates, higher fuel prices, and meaningful economic stimulus through tax reform, infrastructure spending and deregulation.

Purchases and Sales

In the Small Cap Quality Value portfolio, we bought positions in Anika Therapeutics, Lincoln Electric Holdings, SiteOne Landscape Supply and Watsco. In the quarter, we sold our positions in CEB.

Anika Therapeutics is a solid medical device company in a niche area of health care that has solid industry fundamentals, along with a solid and improving market share position. While the company's core visco-supplementation products continue to perform well, we believe the real opportunity is in the company's new products. While it may take some products several years to reach the market, the company's compelling valuation, strong profitability and high cash position warrant a place in our portfolios with a long-term outlook.

Lincoln Electric Holdings is a global leader in the design, development and manufacturing of welding products. We believe the stock warrants an initial position in our portfolios, as the growth of sales over the next five years should be better than the previous five years.

SiteOne Landscape Supply is the largest and only national wholesale distributor of landscape supplies in the U.S. SiteOne is four times the size of its largest competitor, and larger than the number two through ten competitors combined with only a 10% market share. Given its large and fragmented customer and supplier bases, the company has the ability to exert some pricing concessions from suppliers over its smaller competitors while maintaining the ability to price at a premium given fragmented local competition.

Watsco is the largest HVAC distributor in North America, with 10% market share versus 2.5% for the closest competitor. Watsco has strong relationships with several heating, ventilation and air conditioning original equipment manufacturers and their considerable scale creates contractor loyalty.

During the quarter, CEB announced that it was being acquired by Gartner in a cash-and-stock transaction representing about a 25% premium based on the two companies' previous day stock closing prices. With the shares trading at the level representing an insignificant discount to the acquisition price, we exited our position in the company.

Outlook

We believe the stock market and business activity are off to a good start this year. Corrections in the equity market may occur at any time, but conditions for a more meaningful equity bear market do not seem to be in place. President Trump's policy agenda is becoming clearer than it was during the election. However, it is still too early to declare that we have all the details on his agenda for trade policies and foreign affairs. Our patience in not overreacting to last fall's Trump rally has been rewarded. We'll adjust our portfolios if Trump's actual initiatives become reality, rather than speculation or random proposals. From a stock selection perspective, we'll continue to focus on quality companies with protective moats that can do well in both good and bad economic times.

IMPORTANT RISK CONSIDERATIONS: Equity Securities: The market price of equity securities may be adversely affected by financial market, industry, or issuer specific events. Focus on a particular style or on small or medium-sized companies may enhance that risk. **Limited Number of Investments:** Because the fund has a limited number of securities, it may be more susceptible to factors adversely affecting its securities than a less concentrated fund. **Industry/Sector Concentration:** A fund that focuses its investments in a particular industry or sector will be more sensitive to conditions that affect that industry or sector than a non-concentrated fund.

Small Cap Quality Value Portfolio

First Quarter 2017 | Managed Accounts

Disclosure

Kayne Anderson Rudnick Investment Management, LLC claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. Kayne Anderson Rudnick Investment Management, LLC has been independently verified for the period from January 1, 1999 through December 31, 2014.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS® standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS® standards. The Small Cap Quality Value Wrap Composite has been examined for the period from January 1, 1999 through December 31, 2014. The verification and performance examination reports are available upon request.

Kayne Anderson Rudnick Investment Management, LLC, a wholly owned subsidiary of Virtus Investment Partners, Ltd., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. Kayne Anderson Rudnick Investment Management, LLC manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary Small Cap Quality Value Wrap Portfolios. Small Cap Quality Value Wrap Portfolios are invested in equity securities with capitalizations consistent with the Russell 2000® Value Index, that have market control, rising free cash flow, shareholder-

oriented management, strong consistent profit growth, and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Value Index. The Russell 2000® Value Index is a market capitalization-weighted index of value-oriented stocks of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of the independent verifiers. The composite was created in January 2002. A list of composite descriptions and policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.

Beginning on January 1, 2006, sub-advisory wrap fee portfolios are also included in composite results. Each sub-advisory relationship is included in the composite as one account. Prior to January 1, 2011, accounts that experienced a significant cash flow, defined as aggregate flows that exceeded 25% of the account's beginning of period market value, were temporarily removed from the composite. Prior to January 1, 2011, the composite minimum was \$100,000.

The standard wrap fee schedule in effect is 3.00% on total assets. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part IIA of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results. Results will vary among accounts. The U.S. dollar is the currency used to express performance.

Performance results include the reinvestment of all income. Pure gross returns do not reflect the deduction of any expenses, including trading costs. Prior to December 31, 2005, net annual returns are calculated after deducting 1/4th of an assumed maximum annual wrap fee of 3% on a quarterly basis. Beginning January 1, 2006, net annual returns are calculated using actual fees incurred. If no fee data is provided by wrap sponsors, the maximum annual wrap fee of 3% is used to calculate net of fee performance. Wrap fees include all charges for trading costs, portfolio management, custody, and other administrative expenses.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using gross returns) and the benchmark for the 36-month period is presented starting December 31, 2012, because prior to January 1, 2010, the composite return was calculated quarterly and 36 monthly returns are not available.

3-Yr Annualized Standard Deviation (%)

	December 31	Composite	Benchmark
2012		16.04	20.17
2013		14.24	16.05
2014		12.88	12.98
2015		13.64	13.65
