INVESTMENT OPPORTUNITY

The iSectors Post-MPT Growth ETF (the "Fund") seeks to achieve investment returns that outperform the S&P500 stock market index with lower downside risk over a complete market cycle.

The strategy's philosophical foundation is rooted in Modern Portfolio Theory (MPT) which forms the foundation on which the principles of modern asset allocation are built. MPT suggests that multi-asset portfolios can be optimally allocated to provide maximum return for a given level of risk.

iSectors' proprietary "Post-Modern Portfolio Theory" investment model seeks to enhance how the principles of MPT are applied in practice. Features include:

- ▶ An enhanced portfolio allocation methodology
- ▶ Monthly re-optimization of portfolio allocation
- ▶ Remains fully invested across all market cycles
- ▶ A quantitative, objective investment strategy

INVESTMENT PROCESS

The Fund's investment process relies upon a proprietary, rules-based system developed by iSectors over a decade ago. The investment process enhances the application of MPT's asset allocation principles by:

- ▶ Allocating among nine "primary sectors"
- ▶ Rebalancing monthly based on changes in fifteen economic and capital market factors
- ▶ Exclusively utilizing exchange traded funds for sector exposure
- ▶ Considering only downside (negative returns) rather than standard deviation as the measure of portfolio risk

Fund Risks

Allocation: The fund's exposure to different asset classes may not be optimal for market conditions at a given time. Asset allocation does not guarantee a profit or protect against a loss in declining markets.

Portfolio Turnover: The fund's principal investments strategies will result in a consistently high portfolio turnover rate. A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when fund shares are held in a taxable account.

Exchange Traded Fund: The value of an ETF may be more volatile than the underlying portfolio of securities the ETF is designed to track. The costs of owning the ETF may exceed the cost of investing directly in the underlying securities.

Leveraged ETFs: The fund may invest in leveraged ETFs, which are generally non-diversified, and include the risks associated with use of derivatives, imperfect benchmark correlation, leverage and market price variance, each of which can increase volatility and significantly decrease performance.

Prospectus: For additional information on risks, please see the fund's prospectus.

Virtus ETF Advisers LLC serves as the investment adviser and iSectors, LLC serves as the investment sub-adviser to the Fund. The Fund is distributed by ETF Distributors LLC, an affiliate of Virtus ETF Advisers LLC.
